FOREWORD

The Intended Use Plan (IUP) for the Clean Water State Revolving Fund (CWSRF) and the Drinking Water State Revolving Fund (DWSRF) was developed through the resources of the Nebraska Department of Environment and Energy (NDEE). Statements of project need, cost projections, and timing of loan activities were developed based on NDEE's experience with projects and procedures under the CWSRF and DWSRF. In addition, the NDEE held preliminary discussions with potential SRF loan recipients for the purposes of projecting the activities and financial needs of State Fiscal Year (SFY) 2022 and the future. The detailed project scope, timing, and cost will be developed during individual loan agreement negotiations. This IUP will continue in effect from year to year until replaced by Environmental Quality Council (EQC) approval action on the succeeding IUP. Please note that use of the term "Department" is in reference to the NDEE.

RESPONSE TO THE COVID-19 PANDEMIC

In 2021, Nebraska, along with the rest of the global community, was greatly impacted by the Corona virus disease commonly referred to as COVID-19. Effects of the virus have been far reaching and have caused shifts in many activities and facets throughout Nebraska communities. As a result, the NDEE worked to adapt to many of the challenges and changes that COVID-19 brought. Due to increase social distancing, and in an effort to increase efficiency, the SRF programs began to transition more into a digital medium relying more on digital documentation including the signing of loan agreements.

In addition, to help address communities feeling the hardships and challenges brought on by COVID-19, the SRF programs implemented two major financial options. The first was the CWSRF opening up refinancing for existing loans to refinance to current interest rates and administrative fees of 0.5% respectively. Secondly, both CWSRF and DWSRF began offering 0% annual interest and 0% administrative fees on new loans. Both options were made available to assist communities and continue to encourage the protection, repair, and establishment of water services for both clean water and drinking water projects.

2021 DEPARTMENT MERGER WITH DEPARTMENT OF HEALTH AND HUMAN SERVICES

On January 8, 2021, Legislative Bill Number 148 (LB148) titled "Transfer certain environmental safety programs to the Department of Environment and Energy" was introduced to the Nebraska State Legislature. The purpose of the bill was to move six environmental programs from the Nebraska Department of Health and Human Services (DHHS) to the NDEE effective July 1, 2021. One of the included programs was the Nebraska Safe Drinking Water Act, the state authority for the DWSRF program. On March 25, 2021, LB148 was approved by the Legislature and on April 1, 2021, was signed by the Nebraska Governor. Effective July 1, 2021, the NDEE will oversee both the CWSRF and the DWSRF programs.

The move of the DWSRF to the NDEE will have little to no impact on the SRF programs as the NDEE and DHHS staff have always worked closely together and have been committed to providing the full potential possible to assist communities across the state of Nebraska for their clean water and drinking water needs. The DHHS staff who have worked with the DWSRF program will continue to do so with the program and SRF team members will continue to work hard in providing the best resources and tools available for Nebraska communities.

WATER WASTEWATER ADVISORY COMMITTEE

The NDEE participates in the Water Wastewater Advisory Committee (WWAC) loan and grant pre-application screening process. WWAC participants include the U.S. Department of Agriculture-Rural Development (USDA – RD) for their water and wastewater grant and loan programs and the NDEE for the CWSRF and DWSRF programs. Through a week long Kaizen event that took place at the beginning of December of 2019, the NDEE worked with other members of the WWAC with a goal to improve the

application and project review process to maximize funding to Nebraska communities for water and wastewater infrastructure improvements. The new process that was developed has been working smoothly and there have been several positive feedbacks from communities appreciating the changes to help streamline information for their projects. The common pre-application form and guidance are included in Appendix G. Project owners may also contact the individual agencies directly without going to the WWAC.

The Nebraska Department of Economic Development (NDED) had been a participant in the WWAC meetings and provided options for funding with Nebraska's Community Development Block Grant (CDBG) for both clean and drinking water projects for eligible communities. However, as of April 2021, the NDED is no longer a participating member of this committee due to changes within the NDED and the CDBG program.

PUBLIC REVIEW, PARTICIPATION, AND COMMENTS

The IUP and State Project Priority Planning Lists are subject to public review and comment in accordance with federal regulation 40 CFR Part 35. The Department held a public hearing regarding the IUP and state Priority Lists at the regularly scheduled EQC meeting on June 15, 2021 at Lincoln, Nebraska to receive public input and Council approval. The draft IUP, which includes the Project Priority Lists, was made available to the public 30 days prior to the hearing. A summary of the Department's responses to public comment and any public hearing testimony will be prepared and submitted to the EPA Region VII Administrator, along with the IUP and Priority Lists

SECTION I - CLEAN WATER STATE REVOLVING FUND (CWSRF)

INTRODUCTION

The CWSRF was created to provide below market financing for construction of publicly owned wastewater treatment works and nonpoint source control systems. For more information on eligibility, please refer to Nebraska Administrative Code, Title 131, *RULES AND REGULATIONS FOR THE WASTEWATER TREATMENT FACILITIES AND DRINKING WATER CONSTRUCTION ASSISTANCE PROGRAMS* (Effective Date of Last Revision: July 21, 2019).

Title VI of the federal Clean Water Act (CWA) requires the State to propose an annual plan setting forth the manner in which the State intends to use the money available in the Clean Water State Revolving Fund (CWSRF). This document is the State of Nebraska's State Fiscal Year (SFY) 2022 CWSRF Intended Use Plan (IUP) covering the time period of July 1, 2021 through June 30, 2022. Title VI of the CWA also requires that projects funded by the CWSRF be listed on the Project Priority Planning List. A priority system and the Project Priority Planning List are prepared in accordance with Title II, Section 216 of the federal CWA. The Project Priority Planning List and priority system are included with this IUP for approval action by the Environmental Quality Council (EQC). Potential CWSRF projects are selected from the Project Priority Planning List for funding. This IUP is an integral part of the cycle of events carried out annually in administering the CWSRF program. The IUP serves as a basis for developing new capitalization grant payment schedules with the U.S. Environmental Protection Agency (EPA) Region VII Administrator. In addition, the IUP serves as a basis for assessing the State's performance in administering the CWSRF program. This document can be compared to the CWSRF Annual Report for a complete picture of what was planned versus what was accomplished over the year. Assurances and certifications contained in the Operating Agreement established between the NDEE and the U.S. EPA Region VII are incorporated in this IUP by reference.

HIGHLIGHTS AND WHAT'S NEW FOR SFY 2022:

- The Federal budget was passed as of December 27, 2020. The final allotment for the Federal Fiscal Year (FFY) 2021 CWSRF Capitalization Grant for Nebraska is \$8,109,000. This is approximately \$1,000 less than last year's allocation.
- The NDEE and SRF programs, in an effort to increase efficiency and accessibility, has begun transitioning to more electronic formats. Starting in 2020, the SRF began having loan agreements signed electronically.
- Construction Loan interest rates for CWSRF will be set at or below Market Rate.
- Planning and Design Loans will be available to municipalities to encourage pro-active planning efforts. Planning and Design Loans will have an interest rate of 0%, with a 0.5% administrative fee, and a maximum of five year term. Further, should the recipient return to the program for a construction loan related to an awarded Planning Loan, an additional subsidy of loan forgiveness up to the final Planning Loan awarded, may be added to the construction loan.
- Subsidy assistance:
 - Loan Forgiveness eligibility will continue to follow the implemented tiered system for the SFY 2022 IUP:
 - Population Focused
 - Population of 10,000 or less – Capped at 15%
 - Population of 3,300 or less – Capped at 20%
 - Population of 500 or less – Capped at 25%
 - Borrowers will be evaluated based on standard loan forgiveness terms from previous years as well as the new population focused terms and be awarded the loan forgiveness amount of whichever is greater and dependent on availability of funds.
- Median Household Income (MHI) American Community Survey (ACS) five-year data from 2014-2018 will continue to be used for this IUP's data information.

I. CWSRF SOURCES AND USES OF FUNDS

The CWSRF has been created from a series of EPA Capitalization Grants and a required 20% State match provided through State general fund appropriations, Nebraska Investment Finance Authority (NIFA) public offered bond issues or private placements, and administrative fees. Match funding will be accomplished through bond funds and program cash for the FFY 2021 Capitalization Grant and is planned for July 2021, and the match for the FFY 2022 Capitalization Grant is planned for the July 2022 time period. Sources and uses of funds for the program two-year planning period discussed in this IUP are summarized in the following table. See Appendix I: SRF Cash Flow Model for more information.

CWSRF SOURCES AND USES OF FUNDS TABLE

March 1, 2021 Estimate

SOURCES OF FUNDS	
Cash & Unexpended prior grants	212,014,981
2021 Cap Grant	8,109,000
2021 State Match (Bond & Cash)	1,621,800
Estimated 2022 Cap Grant	7,848,000
Estimated 2022 State Match (Bond & Cash)	1,569,600
Loan Repayment SFY 2021	6,733,964
Loan Repayment SFY 2022	10,382,063
Loan Repayment SFY 2023	10,235,636
2-year Projected Interest	6,479,178
TOTAL	\$264,994,222
USES OF FUNDS	
Bond Payment 2021 + 2%	1,654,236
2022 Engineering Admin	674,346
2023 Engineering Admin	500,000
Current Loan Obligation	60,621,405
Green Project Reserve Funding	8,612,400
Funding List	157,832,275
Planning List*	35,099,560
TOTAL	\$264,994,222

(1) The greater of 1% or \$100,000 was withheld from the State grant allocation and awarded separately for 604(b) water quality planning. Estimates are from the FFY 2021 President's Budget.

* Found on page 51

SOURCES AND USES OF ADMINISTRATION FUNDS TABLE

March 1, 2021 Estimate

SOURCES OF FUNDS	
Cash balance	2,924,892
Admin fee remaining SFY 2021	459,028
Admin Fee SFY 2022	819,864
Admin Fee SFY 2023	760,593
2-year projected interest	100,000
TOTAL	\$5,064,377
USES OF FUNDS	
2021 State Match Cash	1,800
2022 State Match Cash	2,000
Program Admin SFY 2021	260,280
Program Admin SFY 2022	804,362
Program Admin SFY 2023	804,362
SFY 2022 Small Town Grant / Planning	622,554
SFY 2023 Small Town Grant/ Planning	409,811
TOTAL	\$2,905,169

II. LONG-TERM AND SHORT-TERM GOAL STATEMENTS FOR THE CWSRF PROGRAM

The federal CWA requires that the CWSRF fund balance be available in perpetuity to provide financial assistance to Nebraska municipalities for future pollution control needs. Nebraska's CWSRF program began in 1989 with an initial federal capitalization grant of \$4,773,100. Since that time, Nebraska has received 33 federal capitalization grants totaling \$248,653,124 (including the estimated FFY2021 grant). Nebraska is required to provide a 20% match for the federal capitalization grants. This has been done with a combination of \$300,000 general funds provided by the Legislature the first year, \$655,000 the second year, and with the proceeds of 21 NIFA bond issues. As of March 1, 2021, these combined funds, along with project loan repayment funds and interest earnings, have been used to make 326 loans to hundreds of Nebraska communities across the state. The CWSRF fund has grown to a net asset level of \$342 million with a \$658.1 million in loans made to Nebraska communities.

A. Long-Term Goals

1. Manage the Nebraska CWSRF Program to fund projects which protect and improve the public health of the citizens of the state.
2. Protect and enhance Nebraska's water resources, the environment, and human health by providing affordable funding for eligible clean water projects.

3. Attend workshops/conferences and meet with municipalities, consultants and other stakeholders to promote the CWSRF program to the public as well as identify potential CWSRF projects and obtain stakeholder input regarding modifications or enhancements to the CWSRF program.
4. Encourage the incorporation of green infrastructure concepts and energy recovery, production, and conservation in CWSRF funded projects through adjusted interest rates and grant opportunities.
5. Request annual EPA capitalization grants and provide state match in a timely manner.
6. Annually prioritize potential CWSRF projects in Nebraska according to the greatest chronic public health and environmental health concerns being addressed and their readiness to proceed with construction and implementation. Allocate available CWSRF funds to projects in a timely manner.
7. Pursue the development of a mechanism to evaluate and prioritize the most appropriate, affordable, and holistic, state, regional, and/or watershed-based solutions that address both point and nonpoint source water pollution problems.
8. Continue working with the other federal, state, and local programs to provide affordable financing for municipal pollution prevention and control projects.

B. Short -Term Goals

1. Develop and implement a Sewer Overflow and Stormwater Reuse Municipal Grants Program to provide funding assistance to borrowers with stormwater needs.
2. Review SRF funding mechanisms/alternatives to determine if an alternative would result in providing greater benefits to more communities.
3. Continue to develop and implement a workforce development program for water utility operators in order to provide assistance to communities in recruiting to combat an aging workforce in utility operations.
4. Target available loan funds to high priority needs in order to encourage construction of the highest impact water quality and/or human health improvement projects by providing the best funding assistance available.
5. Pursue public and private sector partnership by assisting in collaboration between municipalities and industry.
6. Appraise and further develop the Assessing Wastewater Infrastructure Needs (AWIN) program to ensure accurate information is being utilized in determining municipality assistance and calculation of their sustainability risk to properly categorized disadvantage communities.

III. METHODS AND CRITERIA FOR DISTRIBUTION OF FUNDS

Nebraska's proposed distribution of available funds is determined by use of the following steps:

1. Prepare the CWSRF Project Priority Planning List in accordance with Title II Section 216 of the CWA;
2. Use the CWSRF Project Priority Planning List to identify the potential CWSRF projects for placement on the CWSRF Funding List;

3. Develop the CWSRF Capitalization Grant Payment Schedule which will provide resources for making timely binding commitments to the projects selected for CWSRF assistance;
4. Provide for a process to add projects to the CWSRF Project Priority Funding List and to bypass projects on the Funding List; and
5. Fund CWSRF Projects by disbursing 100% of match funds prior to withdrawing federal capitalization funds.

A. Project Priority Planning List Preparation

The NDEE CWSRF Program sends out an annual needs survey to municipalities and consulting engineers to identify projects eligible for funding under Title II Section 212 of the federal CWA and eligible nonpoint source pollution projects. For SFY 2022, the NDEE received 361 Needs Surveys and carried forward two projects from prior years for a total of \$641 million in needs. This is compared to last year's (SFY 2021) where 344 Needs Surveys were received and \$697 million in needs were identified.

Projects identified during the needs survey process are ranked in accordance with the priority ranking system (Appendix A1) and placed on the Project Planning List (Appendix B1). Projects from SFY 2021 Project Priority Planning List that are identified internally by NDEE staff to still be in need are also ranked and included on the Project Priority Planning List. Priority ranking is completed in April. Projects submitted during the IUP public notice period may be added to the Planning List in the IUP hearing by action of the EQC. All survey submissions received after the due date of December 31 will be ranked with zero points; however, projects may still be eligible for funding after the bypass dates.

B. Identify Potential SRF Projects

Willingness of a community to participate in the CWSRF program and readiness to proceed are important considerations for funding; therefore, the Funding List of the potential CWSRF projects is not identical to the ranking order of the Project Priority Planning List. The potential CWSRF projects anticipated for funding in the SFY 2022 IUP are shown on the CWSRF Funding List. All other projects included in Appendix B1 are considered on the Project Priority Planning List. This includes potential CWSRF projects with lower priority or projects that may not be ready to proceed until later in the year.

From FFY 2010 through FFY 2014, federal funding required that a portion of the grant be used for additional subsidization and another portion be used for green infrastructure projects. The June 10, 2014 federal CWSRF amendments permanently changed the additional subsidization requirements. It indicated that states may provide additional subsidization from 0% to 30% based on the amount of total capitalization grant appropriations for all states. However, the FFY 2021 grant still required that 10% of the grant be used for additional subsidization or \$810,900. The FFY 2021 federal funding also required no less than 10%, or \$810,900 of the grant funds to be used for green infrastructure projects. These requirements are further described in Section V.D and V.E. A separate Green Project Reserve Funding List shows projects that may qualify as green. The CWSRF Sources and Uses of Funds table identifies funding based on FFY 2021 Capitalization Grant and anticipated funding in FFY 2022. The planning portion of these lists is sized to obligate anticipated FFY 2022 funding if provided before the next IUP cycle.

Allocation of funds among potential CWSRF projects is a three-step process:

1. Potential CWSRF project sponsors are identified and contacted to determine project timing and level of interest in SRF funding. Those communities expressing a serious interest in proceeding under the SFY 2022 program are then asked to provide information regarding specific project scope, project timing, and funding needs, and are then tentatively listed for funding;
2. The sources and uses for the program funds are identified. The available funds are allocated to potential SRF projects for the Funding List until full allocation is reached. Potential CWSRF projects that are not quite ready to proceed, or of lower priority, are placed on the Project Priority Planning List. Similarly, projects identified as green projects are placed on the Green Project Reserve Funding List; and
3. The Intended Use Plan that includes the Project Priority Planning List is placed on public notice, then submitted to, with comments from the public received, and approved by, the Environmental Quality Council in a public hearing process.

C. Develop CWSRF Capitalization Grant Payment Schedule

In order to prepare a payment schedule for receiving capitalization grant funds from EPA, binding commitment projections were made (i.e. signed loan contracts). The information in the CWSRF IUP Funding List was used to determine the payment amounts. The following table shows the estimated EPA CWSRF Capitalization Grant Payment Schedule.

CWSRF CAPITALIZATION GRANT PAYMENT SCHEDULE TABLE

Program Funding Year	SFY 2022 1Q	SFY 2022 2Q	SFY 2022 3Q	SFY 2022 4Q	SFY 2023 1Q	SFY 2023 2Q
Cap Grant Year	FFY 2021 4Q	FFY 2022 1Q	FFY 2022 2Q	FFY 2022 3Q	FFY 2022 4Q	FFY 2023 1Q
EPA FFY 2021	\$8,109,000					
EPA FFY 2022					\$7,848,000	
State Match	\$1,621,800				\$1,569,600	

D. Bypass Date and Changes to Funding List

The NDEE employs a bypass date for funding of projects. Following the approval of the SFY 2022 IUP by the EQC, the CWSRF will use October 1 as the Bypass Date to help obligate available funds for clean water projects. Projects on the CWSRF Funding List will have priority funding reserved until the October 1 bypass date. After the October 1 bypass date, NDEE will provide financial assistance, subject to availability of funds, to the highest priority projects that are ready to proceed from the Funding List, the Planning List, or any entity identified in this IUP. Environmental or Public Health emergency projects may not be held to the bypass date at the discretion of the NDEE.

While it is not a requirement, the NDEE encourages all projects to apply for funding through the interagency Water and Wastewater Advisory Committee (WWAC). More information on WWAC can be found under the Water and Wastewater Advisory Committee section under the Forward of this IUP.

All SRF projects are required to have a NEPA-like review done prior to any funding. This is done through the issuance of an Environmental Review by the NDEE by a Categorical Exclusion (CatEx) or a Finding of No Significant Impact (FNSI). Projects that have been issued a FNSI or CatEx, but will not be able to close a loan prior to the end of SFY 2021, will be considered “in progress”. Projects in progress in SFY 2021 will

be able to close loans prior to the October 1 bypass date, under the terms noted in the SFY 2021 IUP (except interest rate) unless the SFY 2022 funding list or bypass criteria provide better financing alternatives before that date.

As authorized by Nebraska Revised State Statute §81-15,153, the Director may suspend the provisions of the IUP and prioritize available funds to meet critical public health and environmental needs resulting from a natural or manmade disaster requiring the activation of the State Emergency Operations Plan, or to meet the requirements of funds that are available to the program unexpectedly.

Nebraska, like much of the United States, has wastewater infrastructure needs related to aging pipes, failing and inefficient treatment plants, and/or increased energy costs. Two-thirds of Nebraska's communities are losing population while seeing the existing population increase in age, making them less capable of handling the expense of large wastewater treatment projects. New water quality discharge requirements, such as lower ammonia limits, have put even more pressure on Nebraska's small systems to update their systems. Today, many of the wastewater projects being planned and built make use of newer technology which could reduce operation and maintenance costs and/or energy needs, especially for small systems. With these facts in mind, Appendix B1-a is included in the IUP; it lists communities that may still have undocumented needs. Being included in this IUP and on this list does not mean the community will need, seek out, or receive funding from the CWSRF; but it does recognize the community's possible future needs.

IV. ADDITIONAL INFORMATION AND REQUIREMENTS

A. Administrative Fees

An annual fee of up to 1% may be charged against the outstanding principal on construction loans, and up to 0.5% for planning loans, to meet the long-term administrative costs of the CWSRF program. A reduction of up to 0.25% in fees may be applied on new loans with borrowers who have previously borrowed and have fully repaid SRF loans. A reduction of up to 0.5% in fees may be applied on new loans with borrowers that have current outstanding SRF loan balances. If a project is atypical, the Director may choose to not allow a reduced administration fee. These fees are not included in the loan principal. The Director may waive this fee during construction, except on projects that only receive interim financing during construction. Fees collected in addition to principal and interest, which are not deposited as loan repayments, are considered "income received by the grantee" or "program income."

An annual administrative fee of 0% may be applied to loans made for emergency projects as defined by Nebraska Administrative Code, Title 131, *RULES AND REGULATIONS FOR THE WASTEWATER TREATMENT FACILITIES AND DRINKING WATER CONSTRUCTION ASSISTANCE PROGRAMS* (Title 131), that serve as bridge financing while a borrower awaits to receive funding from other sources, such as the Federal Emergency Management Agency (FEMA). Loan contracts will also establish that if other funding sources cannot be secured, the administrative fee may be adjusted up to 1.0% annually.

Administrative fees can be used to accomplish the long-term and short-term goals of the CWSRF program and for other eligible water quality related purposes. In addition, the fee on a loan made from leveraged bond proceeds may be set to reflect the cost of issuing bonds and management of the leveraged loan portfolio. Fees will be assessed on a semi-annual basis and billed at the same time invoices for principal and interest rates are mailed.

The June 10, 2014 Federal Water Pollution Control Act amendments allow for additional options in determining the amount of administration funds that can be utilized from the capitalization grant. The maximum annual amount of CWSRF funds (not including any fees collected that are placed in the fund) that may be used to cover reasonable costs of administering the fund is the greatest of the following:

1. \$400,000; or
2. 0.2% of the current valuation of the fund which currently would be equal to \$674,346, according to the net position stated in the most current audit; or
3. An amount equal to 4% of all grant awards received by the State CWSRF less any amounts used in previous years to cover administrative expenses, which would total \$2,424,874.

For SFY 2022, the program will allocate \$674,346 for activities that include: program costs for NDEE for day-to-day program management activities, other costs associated with debt issuance, financial management, consulting, engineering, and support services necessary to provide a complete program. Administrative costs are mostly paid out of the program's administration fee cash fund for the year, with the exception of some engineering costs. In addition, the program has implemented Northbridge loan and grant tracking software that was purchased with the administration funds from both CWSRF and DWSRF. Further work on the software is planned for the SFY 2022 and will continued to be paid from these administration funds. The contract was let through EPA.

The CWSRF market loan rate determination procedure is described in the CWSRF program regulations Title 131 and is based on the cost of obtaining money for the Fund and on public finance market rates. The CWSRF market rate will be set at 1.5% for construction loans. Loans for emergency projects, as established by Title 131, that serve as bridge financing until funded by other financial sources and planning loans will have a market rate set at 0% interest rate.

With the approval of LB737 by the Governor on February 24, 2016 during the Nebraska 104th Legislature (2015-2016), the CWSRF is now able to provide financing for loans with a maximum term limit of 30 years. The primary intent of extending term loans from 20 to 30 years is to assist disadvantaged communities that may experience financial hardships in financing their wastewater infrastructure needs. The NDEE has developed the policy found below for establishing various interest rates for loans exceeding 20 years based upon communities' AWIN scores and ranking.

The following is the market loan rate strategy for the SFY 2021. As per regulations, the SRF cannot exceed total Market Rate. The established Market Rate may change quarterly. The Department may apply an interest rate at or below the set Market Rate.

- For loans with terms of 20 years or less:
 - The annual interest rate may be up to 1.5%.
- For loans with terms greater than 20 years:
 - Eligible borrowers with a moderate or high AWIN Sustainability Risk score, or are considered to be under financial hardship by the Department, may have an annual interest rate up to 1.5%.
 - Eligible borrowers with a low AWIN Sustainability Risk score may have an annual interest rate up to 2.0%
 - Municipalities who do not meet the AWIN eligibility criteria may submit a financial hardship report to the Department for additional consideration.
- Projects which incorporate eligible Green Project Reserve (GPR) components may receive a deduction of up to 0.50% annual interest rate depending upon the percentage of project that is GPR eligible.
- Loans made for emergency projects that serve as bridge financing while a borrower awaits to receive funding from other sources, such as FEMA, will have an annual interest rate of 0% for SFY 2022 IUP. The 0% will only apply to the portion that will be covered by other funding sources. Loan contracts will also establish that if other funding sources cannot be secured, the interest may be adjusted up to 1.5%.
- The market rate for Planning Loans will be set at 0% for the SFY 2022 IUP. Further, should the recipient return to the program for a construction loan related to an awarded Planning Loan, an additional subsidy of loan forgiveness up to the final Planning Loan awarded, may be added to the construction loan.

As an effort to continue to create jobs and generate new businesses, NDEE may offer incentives for economic development through reduced interest rates. The Director may adjust the market rate of interest

in response to changing public finance market conditions. The actual interest rate charged on each loan will be determined under the procedures described in Appendix C.

B. Terms

The term limit of all financial assistance will be established by the NDEE and borrower in accordance with federal and state regulations, up to a maximum of 30 years, and cannot exceed the expected life of the project. Planning Loans will have a term up to a maximum of five years.

Repayment of loans will generally be based on a level payment amortization schedule with full amortization within the allowed maximum term of the initiation of operation. Loan recipients may request stepped payments or terms less than the maximum allowable term limit. Loan recipients may make payments early and in excess of their payment schedule. No prepayment is allowed within the first ten years of the loan if the loan recipient has received Forgiveness and/or a Small Town Grant unless the borrower received additional assistance from another funding source. Principal and interest schedules will be adjusted accordingly. For any project that receives a term greater than 20 years, no prepayment is allowed within the first five years of project completion.

C. Refinancing

Refinancing allows wastewater treatment works debt, including previous SRF loans, to be refinanced if the debt was incurred after March 7, 1985. Wastewater treatment works debt that was not previously financed by SRF must have followed all of the SRF requirements at the time it was constructed. For example, Davis-Bacon requirements do not apply to refinancing of projects that had completed construction prior to October 30, 2009. The refinanced interest rate and administration fee will be at the current rates identified in this IUP. Refinanced projects will not be eligible for Loan Forgiveness or Small Town Grants and may only refinance once every 10 years. The term length will not exceed the maximum eligible term from the initiation of operation and there must be at least five years of payment left to refinance a loan.

D. Water Quality Planning

Section 604(b) of the CWA provides for \$100,000 or 1% of the CWSRF allotment, whichever is greater, to be used to carry out water quality management planning under Sections 205(j) and 303(e) of the CWA. Section 604(b) funds are provided through a grant application process separate from the CWSRF capitalization grant process. The CWA Amendments of 1987 amend Section 205(j)(3) and direct the State to consider allocating up to 40% of the allotment to regional public comprehensive planning organizations and appropriate interstate organizations unless the Governor, with approval of the EPA Regional Administrator, agrees that less than 40% should be allocated.

The NDEE has notified appropriate organizations of the pass-through provision. The Department received no applications from appropriate organizations for water quality planning. The 205(j)(1) funds will be used for water quality planning on a statewide basis by the department. The Governor has submitted a proposal to the EPA Region VII Administrator for allocation of these resources.

E. Emergency Loan Assistance

The Department will consider applications for emergency loan assistance in the case of catastrophic failure of existing facilities and Public Water Systems, causing an environmental or public health threat, or for unforeseen threats of contamination to the source water supply in accordance with Title 131. The NDEE may provide funding for emergency projects at any time, subject to availability of funds and aside from the adopted Funding and Planning Lists. Such financing shall not be used for routine maintenance of facilities.

For emergency assistance, eligible recipients will notify the Department of the need for emergency assistance. The notification must include the nature of the threat or failure, potential environmental or public health threat of the emergency, and a complete description of the proposed remedial action.

F. Amendments to the IUP

Amendments to the IUP may be adopted by the EQC after a public notice and comment period.

NDEE may vary from the IUP without additional public participation when/if:

- It is determined to be minor; or
- It is in line with the bypass provisions; or
- An emergency assistance need is realized; or
- Unanticipated additional funds become available for loans and grants, such as through a stimulus program focused on improving water infrastructure.

Any changes such as these may be reported in the Annual Report to EPA.

G. Delinquent Payment Penalty and Penalty Interest

Payments may be considered delinquent if not received within 15 days of the due date and will be assessed with a 5% administrative penalty. Penalty interest will accrue at the rate of 1% per month of the amount of such delinquent payment from and after the due date until it is paid.

H. Audits and Reporting, EPA, and Environmental Requirements

Nebraska's CWSRF program is committed to transparency and accountability. To that end, program information noted in Intended Use Plans, Annual Reports, and other program materials are available upon request or through NDEE's website (<http://dee.ne.gov>). Project milestones and information are reported to EPA through the Project Cost and Benefits Reporting database (CBR) and the Clean Water SRF National Information Management System (NIMS). A new EPA database for NIMS reporting will be rolling out August 2021. CWSRF Projects will be funded by disbursing 100% of state match funds prior to withdrawing federal capitalization funds. An independent audit of the program is conducted annually by the State Auditor of Public Accounts office. Finally, all projects with estimated costs of \$25,000 or greater that receive federal funds are subject to reporting under the Federal Funding Accountability and Transparency Act (FFATA). Beginning with the FFY 2011 Capitalization Grant, FFATA ensures that the public can access information on all recipients through <https://www.usaspending.gov>.

All potential CWSRF funded projects receiving loans from funds directly made available by capitalization grants and identified as Clean Water Section 212 projects must comply with the federal "cross-cutting" provisions (federal laws and authorities that apply by their own terms in federal financial assistance programs). The June 10, 2014 CWA amendments added an Architectural and Engineering procurement requirement beginning October 1, 2014. Architectural and Engineering Services, as defined in the amendments and guidance, include feasibility studies, preliminary engineering, design, engineering,

mapping, surveying, and construction management. If federal funds are utilized for projects that do not have Architectural and Engineering contracts or Architectural and Engineering contracts funded by the CWSRF, then no action is required beyond reporting this in the IUP and Annual Report.

Federal cross cutting authorities, Federal Funding Accountability and Transparency Act (FFATA) requirements, Architectural and Engineering procurement, signage, and sub-recipient monitoring requirements associated with the receipt of more than \$750,000 in federal funds from any source during the fiscal year may be assigned to several projects where an equivalent amount of the capitalization grant is disbursed. The following have been targeted for the receipt of federal funds and therefore, potential sub-recipient monitoring: Aurora, Fairbury, Raymond, and Waterloo.

A National Environmental Policy Act (NEPA)-like environmental review process has also become a requirement of all loans that are considered treatment works with the June 2014 CW amendments. The review will be conducted in accordance with 40 CFR 35.3140(b)(1) through (5) to ensure compliance with the CWA, Section 511(c)(1). The process culminates in the issuance of a FNSI or a CatEx for each potential CWSRF project prior to closing on loan contract documents. The FNSI and CatEx serve as the SRF's commitment to fund a project with current loan terms; however, the funding commitment may expire one year after the document is issued unless a longer time frame is identified. Additionally, the FNSI or CatEx expire five years after the date of issuance as in accordance with the NEPA.

A continuing EPA requirement to address Environmental Results under EPA Assistance Agreements will be met by the inclusion of a summary or copy of this information in the Annual Report.

All CWSRF projects are required to comply with the Civil Rights Act of 1994 and related anti-discrimination laws. The FFY 2010 appropriation required that CWSRF loans contain provisions that all laborers and mechanics working for contractors and sub-contractors be paid at the prevailing wage rates, commonly referred to as Davis-Bacon wage determinations. The June 2014 CWA amendments codified the Davis-Bacon wage determination beginning October 1, 2014. It requires the application of Davis-Bacon prevailing wage rates to all wastewater treatment work projects funded in whole or in part by the CWSRF. Davis-Bacon applies to construction contracts over \$2,000 and their subcontractors (regardless of subcontract amount). To ensure compliance with these requirements, NDEE will verify that the correct wage determinations are being included in the bid specifications and/or construction contracts. NDEE will also provide assistance recipients with the specific EPA Davis-Bacon contract language that is to be included in bid specifications and/or contracts and forms for the recipient to document compliance with the Davis-Bacon provisions based upon a review of weekly payrolls.

Davis-Bacon requirements do not apply to refinancing of projects that have completed construction prior to October 30, 2009. Davis-Bacon requirements only apply to projects that are considered treatment works and therefore will not apply to projects that are not defined as a treatment work.

The Consolidated Appropriations Act of 2014 (Public Law 113-76) included an "American Iron and Steel (AIS)" requirement that required the CWSRF assistance recipients to use iron and steel products that were produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system or treatment works if the project was funded through an assistance agreement executed beginning January 17, 2014, through October 1, 2014. The June 10, 2014 CW amendments have now codified the American Iron and Steel requirement. American Iron and Steel only applies to projects that are considered wastewater treatment works.

The June 2014 CW amendments also included an Architectural and Engineering procurement (described above), Fiscal Sustainability Plan, Cost and Effectiveness analysis, and a requirement to establish an Affordability Criteria. Fiscal Sustainability Plans apply to the repair, replacement, and/or expansion of a treatment work project whose application was received on or after October 1, 2014. A Fiscal Sustainability Plan describes how a wastewater treatment facility owner will fund the creation, acquisition, operation, maintenance, rehabilitation and disposal of assets to meet an owner's established level of service with the least overall cost from startup, operation, and end of life. The plans must include energy and water efficiency improvements. The Cost and Effectiveness analysis applies to all eligible recipients who submit an application on or after October 1, 2015. A Cost and Effectiveness analysis evaluates the design approaches

that meet an owner's performance requirements while maximizing the potential for water and energy efficiency to the extent practicable. The Affordability Criteria had to be established by September 30, 2015 to assist in identifying municipalities that would experience a significant hardship raising revenue necessary to finance a project. The criteria must include income, unemployment data, population trends, and other data determined relevant by the Department. The criteria and procedures are described in Appendix F.

I. Transferring Authority of funds between the CWSRF and DWSRF

Section 302 of the of the Safe Drinking Water Act Amendments of 1996 authorized the transfer of funds between the Drinking Water State Revolving Fund and the Clean Water State Revolving Fund. The rules governing the transfer of funds limit the dollar amount a state can transfer to no more than 33% (thirty-three percent) of a Drinking Water SRF capitalization grant. As funding is available and as needs arise, the Department can transfer loan funds with the approval of the EQC in accordance with Section II, Part I. DWSRF SOURCES AND USES OF FUNDS of this IUP. Transfers between the two funds may enhance the lending capacity of one or both state revolving funds. Nebraska Revised State Statutes §71-5318 and §81-15,153 provide Nebraska's legal authority to implement this transfer of funds and, with the approval of this IUP, the Department reserves the right to make such transfers between the programs for SFY 2022.

To date, there have been no transfers of funds between the CWSRF and DWSRF.

J. Workforce Development Study

An aging workforce in utility operations is a challenge that all public drinking water and wastewater systems face in the State of Nebraska. Attracting workers to small communities continues to be a hurdle with the movement of jobs and populations to urban centers. A workforce development study will be conducted and funded through the State Revolving Fund program. The agency hopes this study will provide assistance to community drinking water and wastewater systems in recruiting operators to be trained by existing staff to operate their water system. Prioritization will be given to systems serving populations less than 5,000, and those in areas where a military veteran or their spouse has expressed interest in working, and who has completed the necessary free course(s) towards certification. Other applicants will also be considered to help fulfill a community's needs and a pool of potential applicants will be retained to assist communities in finding certified operators. NDEE will work as a liaison between newly certified operators and communities in-need. It is anticipated that this will be a three to four year project, followed by a report prepared by the Workforce Development Team which outlines the effectiveness of this workforce initiative.

V. CWSRF GRANTS

A. Project Planning Activities and Report Grant

The Department is reserving \$100,000 from the Administration Cash Fund for Project Planning Activities and Report (PPAR) grants and other financial assistance under this section as long as funds are available. Additional funds may be provided dependent on availability of funds and demand for planning assistance.

PPAR grants may be provided to municipalities with populations of 10,000 or fewer inhabitants which demonstrate serious financial hardship. Municipalities must indicate on the annual CW Needs Survey that a Facility Plan, Preliminary Engineering Report, or Study is desired and the wastewater treatment facility project must be identified on the CWSRF Project Priority Planning List in Appendix B1. Municipalities must also not have received a PPAR grant in the previous five years. After July 1, the Department will inform municipalities if they are eligible for PPAR grants. PPAR grants may be provided for up to 90% of the eligible project cost. The Department will limit the maximum amount of PPAR grant funds to \$20,000 per project. If more grant applications are received than the amount of funds available, the grants will be awarded to the

communities with the highest Needs Survey priority points. Any unused funds may be used for emergency grant purposes.

The Department may also provide financial assistance through a PPAR grant for projects to investigate low-cost options for achieving compliance with the CWA, to encourage wastewater reuse, and conducting other studies for the purpose of enhancing the ability of communities to meet the requirements of the CWA.

B. Small Town Grant

Small Town Grants (STGs) are made concurrent with loans to qualifying communities of 10,000 population or fewer and are subject to availability of funds. The total of Project Planning Activities and Report Grant and Small Town Grant must not exceed 50% of the previous year's administrative fee receipts. The Department will limit the maximum amount of Small Town Grants to \$250,000 per project. Projects are prioritized based on type of project and financial hardship. The Small Town Grant program allocation procedure is further described in Appendix E. A portion of the funds reserved for Small Town Grants may be used for Project Planning Activities and Report Grants provided under paragraph A, Section V above, if planning demand is high and Small Town Grant money is available. Total CWSRF grant award for any borrower cannot exceed one half of total eligible project costs.

C. Emergency Grant

The Department has authority to provide Emergency Grant funding from the Administration Cash Fund. The Department will consider applications for emergency grants, subject to availability of funds, to an eligible borrower with a wastewater treatment works which has been damaged or destroyed by natural disaster or other unanticipated actions or circumstances. Such grants will not be used for routine maintenance of facilities.

The eligible borrower shall notify the Department of the need for emergency assistance by completing and submitting a report which: 1) Describes the type of emergency; 2) Provides a complete description of the proposed remedial action; and 3) Includes the estimated cost for the proposed remedial action.

The Department may consider financial capability of an eligible borrower in authorizing an emergency grant. A grant or a grant and loan combination may be offered. The loan portion of the grant and loan combination will be subject to the administrative requirements for other loans governed by Title 131, State Statute, and Federal Regulations.

D. Loan Forgiveness

Federal CWSRF regulations specify a state may provide additional subsidization in a fiscal year if the total amount appropriated for making capitalization grants to all states exceeds \$1 billion. States may then use up to 30% of the total amount received in their capitalization grant for additional subsidization. If, in a fiscal year, the amount appropriated for making capitalization grants to all states exceeds \$1 billion by a percentage that is less than 30%, then the percentage above \$1 billion should be used in place of 30%. Federal regulations also require states to develop affordability criteria to assist in identifying applicants that would have difficulty financing projects without additional subsidization. The criteria must be based on income, unemployment data, population trends, and other data determined relevant by the State. The Department chooses to provide additional subsidization in the form of loan forgiveness to qualifying communities that meet the requirements described in Appendix F. Loan recipients who receive loan forgiveness will not be required to repay on the portion that is considered forgiven and the loan contract will provide further details on the terms and conditions. At the time of the loan closing, all current Intended Use Plan conditions are in effect and past IUP conditions are not available to the loan recipient unless directly specified.

In an effort to provide communities with additional financial assistance and to create similar loan terms and conditions across both SRF programs, the CWSRF loan forgiveness allocation determination will add similar eligibility criteria to that of the DWSRF program.

Loan Forgiveness will be made available only for communities of populations of 10,000 or less and are considered a financial hardship demonstrating a Nebraska Assessing Wastewater Infrastructure Needs (AWIN) sustainability risk category of “moderate” or “high”. Communities that are not listed in AWIN, or have a score other than “moderate” or “high”, may submit to the NDEE documentation sufficiently demonstrating financial hardship and a request to be considered eligible for loan forgiveness. The SRF program will review and approve or deny requests made.

In addition, starting SFY 2021, the CWSRF implemented two categories of loan forgiveness eligibility.

Category 1*:

- Less than 10,000 population;
- An AWIN categorization of “Moderate” or “High” Risk, or is considered a financial hardship;
- Percentage eligible dependent on MHI value; and
- Maximum loan forgiveness of \$150,000, up to 50% of loan

Category 2*:

- Less than 10,000 population;
- An AWIN categorization of “Moderate” or “High” Risk, or is considered a financial hardship; and
- Percentage eligible dependent based on population;

**See Appendix F for full information on Loan Forgiveness eligibility and criteria.*

Total CWSRF grant award for any borrower cannot exceed one half of total eligible project costs.

Borrowers will be assessed under both categories and will be awarded the greater of the two. For loans effective prior to July 1, 2020, borrowers seeking refinancing with new loan forgiveness conditions must submit to NDEE sufficient documentation demonstrating severe financial hardship and to be approved by the SRF program.

For borrowers who have been awarded a Planning Loan, additional subsidy of loan forgiveness may be awarded to borrowers who return to the program for a construction loan directly related to an awarded Planning Loan. The borrower may be rewarded an amount of up to the final Planning Loan awarded.

The FFY 2021 federal grant conditions state that 10% of the capitalization grant must be used for additional subsidization. The Department will reserve a minimum of \$810,900 (10% of the capitalization grant) for forgiveness to be used for additional subsidization. The Department’s power and authority to distribute the additional subsidization is an existing authority under the Nebraska Environmental Protection Act, Nebraska Revised Statute §81-1504(4) and the Wastewater Treatment Facilities Construction Assistance Act, Nebraska Revised Statute §81-15,150. Together, these statutes allow the Department to accept and expend federal grants for projects described in these references.

E. Green Project Reserve (GPR)

EPA has required or encouraged states to fund “green” projects. Typically, green infrastructure projects include water or energy savings or efficiency measures, storm water management, or other innovative concepts to save water or energy. Green infrastructure projects for possible funding include the following: Laurel, Monroe, Plymouth and Schuyler. Should the above mentioned projects fail to proceed or qualify as green infrastructure, the Department will make a continued effort to solicit additional qualifying projects. Every effort will be made to fund the required 10% reserve amount during this IUP cycle. Projects containing eligible GPR will receive up to a 0.50% reduction in interest rate to help encourage incorporation of green infrastructure.

F. New and Innovative Technology Grant (NIT Grant)

NDEE would like to ensure projects which introduce noteworthy innovations in technology that advances the drinking water, wastewater, and nonpoint source profession are recognized and supported. An additional subsidy may be offered for these potential innovations as long as funds are available. Examples include projects that explore and elevate the drinking water quality and wastewater treatment standards and challenge the current institutional approaches to water treatment and technology. Projects will adhere to eligibility requirements and regulations as other SRF grant programs. No more than \$1,000,000 shall be used for the NIT Grant and is not part of any set-aside; thereby if these funds are available they may also be used for CWSRF loans if needed.

VI. LEVERAGED OR POOLED BOND ISSUES

Many communities are anticipating large capital expenditures associated with combined sewer separation, storm sewer, interceptor sewers, wastewater treatment plant upgrades, and nonpoint source control projects in SFY 2022 and beyond. Many of these projects are listed in the Intended Use Plan. In order to have the opportunity to meet the anticipated needs, the Department proposes to have the ability to borrow funds through NIFA bond issues by leveraging the existing Clean Water State Revolving Loan Fund. The CWSRF fund has approximately \$342 million in net assets, and has a \$5.3 million annual revenue stream capable of supporting or securing leveraged bond issues, in addition to repaying the required 20% match bonds issued by NIFA. The Department is required to obtain EQC authorization prior to NIFA issuance of any leveraged bonds.

Leveraged bonds may be issued for any municipality or group of municipalities with eligible needs that meet program requirements but are otherwise unable to obtain CWSRF loans due to availability of funds or their position on the priority list. Each leveraged bond issue will be designed as a self-supporting issue. The loan or loans made out of the proceeds from a leveraged bond issue will be designed to support that issue. The revenue from all of the other loans in the program may be used as a credit enhancement or supplemental pledge to improve the bond rating and lower interest rates on the leveraged bonds.

The interest rate charged to communities included in the leveraged pool will be based on the interest rate of the leveraged bonds. Also, the cost of issuance, as well as the cost of administration, will be considered in assessing administrative fees on these loans.

The Department has been considering leveraging and reserves the right to leverage in SFY 2022.

VII. SOURCE WATER PROTECTION AREA and WATER METER PROJECTS

Projects associated with Source Water Protection areas are qualified for funding under nonpoint source eligibilities in the Clean Water State Revolving Loan Program and may be on the CWSRF priority list. In addition, the list of projects for Source Water Protection areas, which may be funded through the Source

Water Protection set-aside under the Drinking Water State Revolving Fund (DWSRF) Program, is provided in Section II. Source Water Protection area projects which are listed in Section II need not be listed on the CWSRF priority list to be eligible for funding. The CWSRF will consider funding Source Water protection area projects from DWSRF Section II of this document after the CWSRF October 1 bypass date, and subject to availability of funding.

The DWSRF program in the past has funded drinking water meter projects out of the DWSRF Green Project Reserve. Water meter projects are also an eligible item under the CWSRF, and several have been funded in this manner, incidental to larger CWSRF funded projects. The CWSRF program will consider funding water meter projects from CWSRF Green Project Reserve funds after the CWSRF bypass date of October 1, dependent on the availability of funds. Forgiveness funding for those water meter projects, if available, will be offered under the same conditions provided by the DWSRF, which is set at a 20% forgiveness ceiling level.

VIII. LINKED DEPOSIT PROGRAM

This program is available to public or private entities for the construction, rehabilitation, and enhancement of eligible nonpoint source control systems. The CWSRF will partner with eligible lending institutions that will provide low interest loans to borrowers. Under a linked deposit loan program, the State agrees to deposit funds into an account with the eligible lending institution and the lending institution agrees to provide a loan to a borrower at a reduced interest rate below common market rates. No more than \$2,000,000 shall be used for the Linked Deposit Program, if funded in SFY 2022. The \$2,000,000 is not part of any set-aside; thereby if these funds are available they may also be used for CWSRF loans. The type of nonpoint source control system projects include:

1. Onsite Wastewater Projects – Projects for onsite wastewater and private septic systems. This can include new onsite systems or the repair/replacement of an existing one.
2. Local Water Protection Projects – Projects include best management practices for nutrient control and other practices that have an environmental benefit.
3. Livestock Water Quality Facilities Projects – Projects include assisting livestock producers with manure management plans, structures, equipment, and more. Eligible borrowers include facilities not requiring a National Pollutant Discharge Elimination System (NPDES) permit. Linked Deposit funds cannot be used for a project that would turn a non-NPDES permitted facility into a permit required facility.

A listing of general requirements for the Linked Deposit Program, including establishing a Linked Deposit Lender Agreement, have been added into this IUP under Appendix H – General Requirements for the Linked Deposit Program.

The Department is also researching and conducting strategic reviews on the Linked Deposit Program's funding abilities, policies, and regulations and evaluating them to help utilize and shape the program to better address Nebraska's nonpoint source needs. This includes expanding the Linked Deposit Program to allow more opportunities and securities for local banks to provide low cost loans for borrowers and their projects as well as expanding project eligibilities to include other water quality categories allowed under the Clean Water Act.

2022 CWSRF PROJECT PRIORITY FUNDING LIST

Priority Points	Community	ACS 2014-2018 Est. MHI	NPDES ID#	US Census 2010 Est. POP	Project Description(s)	Project Est. Cost	SRF Est. Funding
79	Aurora	\$63,053	NE1131810	4,479	South Interceptor sanitary sewer main to WWTF - \$2,400,000; Sewer main relocation 16th St and H St - \$400,000; Sanitary sewer force main 1st St and Adams St to WWTF - \$500,000; WWTF site irrigation by reuse water (Green Project) - \$100,000; Sewer main ext. Northridge sub further development - \$500,000; Sewer main ext WWTF south to Power Park development via R road - \$2,200,000; Sewer main ext Green Way sub south to Power Park Development - \$1,800,000; Existing lift station and WWTF repair/ rehabilitation - \$1,000,000; Sewer main ext Streeter's 3rd and 4th additions expansion - \$300,000; Lift station construction South 16th street development - \$500,000; Sewer main ext Craig road - \$200,000; Sewer main ext Jennifer road - \$100,000; Sewer main ext Terrie road and Glenn road - \$200,000; Sewer main ext Matson West sub further development - \$350,000; Jennifer road paving including storm sewer - \$400,000; Ext. force main from interstate battery phase to Phase 1(A St.) & upgrade south lift pumps - \$500,000; Terrie road paving including storm sewer - \$400,000; 9th Street north to Terrie road paving including storm sewer - \$500,000; Sewer main ext. SECTION II - DRINKING WATER STATE REVOLVING FUND (DWSRF)

INTRODUCTION

The DWSRF was created to provide low cost financing for construction of publicly or privately owned public water systems. For more information on eligibility, please refer to NDEE's Title 131.

Section 1452 of the Safe Drinking Water Act (SDWA) requires the state to prepare an annual plan setting forth the manner in which the State intends to use the monies available in the DWSRF. This is Nebraska's SFY 2022 Intended Use Plan (IUP) covering the time period of July 1, 2021 through June 30, 2022. This IUP is an integral part of the cycle of events carried out annually in administering the SRF programs. The IUP serves as a basis for developing grant payment schedules with the U.S. Environmental Protection Agency (EPA) Region VII Administrator prior to awarding new capitalization grants to the State. In addition, the IUP serves as a basis for assessing the State's performance in administering the SRF programs. This document can be compared to the Annual Report to EPA for a complete picture of what was planned versus what was accomplished over the year. This IUP includes the DWSRF Priority Ranking System and Project Priority Lists. Assurances and certifications contained in the Operating Agreement established between the NDEE and the U.S. Environmental Protection Agency, Region VII, are incorporated in this IUP by reference.

HIGHLIGHTS AND WHAT'S NEW FOR SFY 2022

- The federal budget that was passed as of December 27, 2020 and the Federal Fiscal Year (FFY) 2021 DWSRF Capitalization Grant that Nebraska will receive is \$11,001,000.
- The NDEE and SRF programs, in an effort to increase efficiency and accessibility, has begun transitioning to more electronic formats. Starting in 2020, the SRF began having loan agreements signed electronically.
- Legislative Bill Number 148 (LB148) titled "Transfer certain environmental safety programs to the Department of Environment and Energy" was introduced to the Nebraska State Legislature. The purpose of the bill was to move six environmental programs from the Nebraska Department of Health and Human Services (DHHS) to the NDEE effective July 1, 2021. The move of the DWSRF to the NDEE will have little to no impact on the SRF programs as the NDEE and DHHS staff have always worked closely together.
- Construction Loan interest rates for DWSRF will be set at or below Market Rate.
- Planning and Design Loans will be available to municipalities to encourage pro-active planning efforts. Planning and Design Loans will have an interest rate of 0%, with a 0.5% administrative fee, and a maximum of five year term. Further, should the recipient return to the program for a construction loan related to an awarded Planning Loan, an additional subsidy of loan forgiveness up to the final Planning Loan awarded, may be added to the construction loan.
- Additional loan forgiveness may be added to new loans, wherein a past borrower agrees to amend existing DWSRF loan agreements and the Department's prepayment requirements. The added forgiveness amount would be equivalent to the refinancing savings permissible under the CWSRF program.
- The projects eligible for financial assistance to address public health concerns have been expanded to include those that resolve manganese issues approaching EPA's public health advisory level of 300 µg/l.
- Median Household Income (MHI) American Community Survey (ACS) five-year data from 2014-2018 will continue to be used for this IUP's data information.

I. DWSRF SOURCES AND USES OF FUNDS

The DWSRF is being created from a series of EPA capitalization grants, a required 20% state match from state general fund appropriations, the program’s Administration Cash Fund, and Nebraska Investment Finance Authority (NIFA) public offered bond issues. The FFY 2021 grant will be bond matched, supplemented with Administrative Cash Fee funds. See Appendix I: SRF Cash Flow Model for more information. Sources and uses of funding in the program years discussed in this IUP are summarized below. There are also some funds remaining in set-asides from prior year grants (see Section IV(D)).

DWSRF SOURCES AND USES OF FUNDS TABLE

March 1, 2021 Estimate

SOURCES OF FUNDS	
Cash and unexpended prior grants	141,359,717
EPA FFY 2021 Capitalization Grant	11,001,000
State 2021 Match	2,200,000
EPA FFY 2022 Capitalization Grant	13,310,000
State 2022 Cash Match	2,662,000
June 15, 2021 Loan Repayments	6,767,434
SFY 2022 Loan Repayments	6,560,150
SFY 2023 Loan Repayments	5,942,583
2-Year Projected Interest on Fund Balance	8,000,000
TOTAL	\$197,802,884
USES OF FUNDS	
Match Bond Payment 2022	1,500,000
Match Bond Payment 2023	1,650,000
Small System Technical Assistance 2022	220,020
Small System Technical Assistance 2023	266,200
Capacity Dev/Source Water Protection 2022	1,650,150
Capacity Dev/Source Water Protection 2023	725,000
Public Water System Program Admin 2022	1,100,100
Public Water System Program Admin 2023	1,331,000
Current Loan Obligations	20,423,686
Funding List	151,008,535
SFY 2022 Planning List*	17,928,193
TOTAL	\$197,802,884

* Found on page 85

SOURCES AND USES OF ADMINISTRATION CASH FUNDS TABLE

March 1, 2021 Estimate

SOURCES OF FUNDS	
Cash Balance	911,264
June 15, 2021 Fee Receipts	350,206
SFY 2022 Fee Receipts	665,718
SFY 2023 Fee Receipts	620,804
2-Year Projected Interest on Fund Balance	40,000
TOTAL	\$ 2,587,992
USES OF FUNDS	
Program Administration SFY 2021/2022	702,000
Program Administration SFY 2023	527,807
Planning Grants SFY 2022	100,000
Planning Grants SFY 2023	100,000
Workforce Development Grants SFY 2022	250,000
Emergency Grants SFY 2022	500,000
Grant Cash Match SFY 2021/2022	200
Grant Cash Match SFY 2022/2023	2,000
PROJECTED ADMIN FUND BALANCE	\$ 2,008,973

Note: The Administration Cash Fund may also be used for unanticipated disbursements of Planning/Source Water Protection Grants, and for Forgiveness assistance in accordance with DWSRF State Statute.

Section 1452 of the SDWA authorizes states to set-aside funds to implement provisions of the SDWA. Discussion on the planned utilization of these set-asides follows.

The DWSRF Administration Expense (4%) set-aside may be used for DWSRF program administration. These activities may include program costs for the NDEE's day-to-day program management activities and other costs associated with debt issuance, financial management, consulting, and support services necessary to provide a complete program. In addition, technical assistance to public water systems can be funded from this set-aside. However, administrative costs will be paid out of the program's Administration Cash Fund for this year.

The Small System Technical Assistance (2%) set-aside may be used to provide technical, financial, and managerial assistance to Public Water Systems serving 10,000 or fewer persons. This will be accomplished through contracts with organizations and/or engineering consultants with expertise in dealing with small systems and will be coordinated by NDEE, including rural leak detection. For this set-aside, the DWSRF will allocate the full 2% funding amount from the FFY 2021 and projected FFY 2022 grants, a total of \$220,020 and \$266,200, respectively. Further, it is planned that Nebraska's 2% Team, which is composed of numerous organizations and private citizens interested in public water supply issues, will continue to develop initiatives. The following is the past 2% Set-Aside – Reserved Authority:

2% Set Aside – Reserve Authority	Amount
FFY 2016 Cap Grant	\$332,480
FFY 2019 Cap Grant	\$440,160
FFY 2020 Cap Grant	\$440,440
Total Reserved Authority	\$1,213,080

Under the Local Assistance & Other State Programs (15%) set-aside, NDEE will allocate \$300,000 for the administration of Capacity Development, Source Water Protection, Onsite and the Well Drillers program from FFY 2021 funds. The set-aside will also fund land acquisition projects from the noted funding project table. The latter will include costs for contracting groundwater modeling efforts and a groundwater evaluation tool. The program proposes to allocate \$425,000 from FFY 2021 funds for security grant and source water protection activities, described in detail in subsequent sections. Dependent upon the grant conditions, it is planned that \$725,000 from the FFY 2022 funds and from unexpended historical allocations of this set-aside will be used for similar activities.

15% Set Aside – Reserve Authority	Amount
FFY 2016 Cap Grant	\$176,900
FFY 2019 Cap Grant	\$220,080
Total Reserved Authority	\$396,980

The Public Water Supply Program (PWSP) Administration (10%) set-aside, is used to provide personnel salaries, benefits, and all other related operating expenses (e.g., travel, etc.) for staff employed in Nebraska’s Public Water Supply Supervision (PWSS) Program. The staff positions include program specialists in the Monitoring and Compliance Program and the Field Services Program, engineers in the Engineering Services Program (e.g., plan review) and may include geologists in the Groundwater Section. For this year, fund from this set a side will also be used to make improvements to the SDWIS database. This year, the full 10% funding amount will be allocated from the FFY 2021 and projected FFY 2022 grants, a total of \$1,100,100 and \$1,331,000, respectively. The following is the 10% Set-Aside - Reserved Authority from past Capitalization grants:

10% Set-aside Reserved Authority	Amount
FFY 1997 Cap Grant	\$983,958
FFY 1998 Cap Grant	\$412,130
FFY 1999 Cap Grant	\$446,380
FFY 2000 Cap Grant	\$475,700
FFY 2001 Cap Grant	\$478,913
FFY 2002 Cap Grant	\$505,250
FFY 2003 Cap Grant	\$500,410
FFY 2004 Cap Grant	\$530,310
FFY 2005 Cap Grant	\$528,550
FFY 2006 Cap Grant	\$522,930
FFY 2007 Cap Grant	\$122,930
ARRA Cap Grant	\$618,900
FFY 2010 Cap Grant	\$523,500
Total Past Reserved Authority	\$6,649,861
Proposed SFY 2021 Allocation	\$0
Total Reserved Authority	\$6,649,861

On March 12, 2019, the Governor approved LB307 allowing for the transfer of funds between the CW and DW SRFs. This transfer of funds authority was originally authorized through FFY2001 under Section 302(a) of P.L. 104-182, the federal Safe Drinking Water Act Amendments of 1996. The Department of the Interior, Environment, and Related Agencies Appropriations Act, 2006 (P.L. 109-54, Title II, August 2, 2005, 119 Stat. 530), provided: "That for fiscal year 2006 and thereafter, State authority under section 302(a) of P.L. 104-182 shall remain in effect." Thus the statute provides the same authority established by congress in P.L. 109-54, up to 33% of each DWSRF capitalization grant may be transferred between the funds. The table below is provided this year to establish the reserved authority for the FFY 1997 through FFY 2021 capitalization grant time period, which previously was not noted.

CW and DW SRF Transfers - Reserved Authority	Amount
FFY 1997 Cap Grant	\$4,231,920
FFY 1998 Cap Grant	\$2,350,029
FFY 1999 Cap Grant	\$2,463,054
FFY 2000 Cap Grant	\$2,559,810
FFY 2001 Cap Grant	\$2,570,412
FFY 2002 Cap Grant	\$2,657,325
FFY 2003 Cap Grant	\$2,641,353
FFY 2004 Cap Grant	\$2,740,023
FFY 2005 Cap Grant	\$2,734,215
FFY 2006 Cap Grant	\$2,715,669
FFY 2007 Cap Grant	\$2,715,669
FFY 2008 Cap Grant	\$2,688,180
FFY 2009 Cap Grant	\$2,688,180
ARRA Cap Grant	\$6,435,000
FFY 2010 Cap Grant	\$4,479,090
FFY 2011 Cap Grant	\$3,107,940
FFY 2012 Cap Grant	\$2,961,750
FFY 2013 Cap Grant	\$2,816,189
FFY 2014 Cap Grant	\$2,918,850
FFY 2015 Cap Grant	\$2,899,710
FFY 2016 Cap Grant	\$2,742,960
FFY 2017 Cap Grant	\$2,742,960
FFY 2018 Cap Grant	\$3,665,310
FFY 2019 Cap Grant	\$3,631,320
FFY 2020 Cap Grant	\$3,633,630
FFY 2021 Cap Grant	\$3,630,330
Total Past Reserved Authority	81,420,877
Proposed SFY 2022 Allocation	\$0
Total Reserved Authority	\$81,420,877

For the additional subsidization required by the Federal Fiscal Appropriation, the DWSRF intends to provide at least the \$1,100,100 in loan forgiveness funding from the FFY 2021 grant, and blend it with leftover forgiveness assistance from past grants to at least \$14.4 million in forgiveness assistance during the SFY. Forgiveness funds will be targeted primarily to the highest ranked eligible projects on the Priority Funding Lists. These include projects that address public health needs, are needed to address critical capacity development concerns, and those that replace existing public water system infrastructure. Forgiveness assistance will be provided at the time a disbursement request is processed.

- Additional loan forgiveness in an amount not to exceed 65% of the revenue from administrative fees collected in the prior fiscal year may be provided in SFY 2022 from the Administration Cash Fund, most notably if a state source of forgiveness funding is required for a project. All levels of

forgiveness will be reported in the Finding of No Significant Impact Statement (FNSI) or Categorical Exclusion (CatEx), whichever is issued for a project, before the loan agreement is signed. Lastly, Additional loan forgiveness may be added to new loans, wherein a past borrower agrees to amend existing DWSRF loan agreements and the Department's prepayment requirements. The added forgiveness amount would be equivalent to the refinancing savings permissible under the CWSRF program.

II. LONG-TERM AND SHORT-TERM GOAL STATEMENTS FOR THE DWSRF PROGRAM

The overall goal of the DWSRF is to assist Public Water Systems (PWSs) in protecting the health and welfare of Nebraskans by helping to assure safe, adequate, and reliable drinking water through the provisions of the Nebraska Safe Drinking Water Act administered by NDEE.

A. Long-Term Goals

1. Manage the DWSRF fund so its revolving nature is assured in perpetuity in order to provide a source of continuing financial assistance to PWSs for future drinking water needs. It is our intent to request EPA capitalization grants and obtain state match in a timely manner, and to allocate match and recycle funds to projects in a timely manner.
2. Survey systems for drinking water infrastructure needs so NDEE can maintain a database for making program decisions, and to evaluate user charges on a regular basis.
3. Protect the public health by maximizing funding towards high priority projects.
4. Promote cost-effective water projects which consider several alternatives and include a cost-effectiveness analysis comparing the appropriateness of the alternatives.
5. Coordinate with the U.S. Department of Agriculture-Rural Development and the Nebraska Department of Economic Development-Community Development Block Grant programs to provide affordable financing for public drinking water needs.
6. Balancing the need for fund growth at the rate of inflation experienced in the construction industry versus the desire to provide loans at low interest rates. The fund and loan interest rates and cost of borrowing the state match will be examined annually to evaluate the fund net growth and determine the reasonableness of loan interest rates. Management practices will be reviewed and modified annually to assist in achieving the growth goals.
7. Progress toward incorporating source water protection best management practices into public water supply operations.

B. Short -Term Goals

1. Continue to attract customers to the program with low interest rates.
2. Commit available loan funds to as many of the highest priority projects as possible.
3. Assist systems which need to upgrade or construct new drinking water projects to attain and/or maintain compliance with the provisions of the Nebraska Safe Drinking Water Act and the regulations adopted there under.

4. Assist systems in meeting required drinking water quality standards. This includes giving funding priority to systems with compliance deadlines established by the NDEE.
5. Work with systems in need of technical, financial, and managerial assistance.
6. Provide at least 15% of the DWSRF capitalization funds for loans to small systems with populations less than 10,000. It is estimated that over 80% of the loans planned for closure in SFY 2022 will be made with small systems.
7. Revisions of source water delineations and the transition from source water assessments to protection activities will continue, utilizing the source water protection set-aside for granted projects.
8. Continue to develop a marketing program.

III. METHODS AND CRITERIA FOR DISTRIBUTION OF FUNDS

Nebraska's proposed distribution of available funds was determined by use of the following steps:

1. State identified set-aside amounts as authorized by the SDWA;
2. NDEE identified and ranked projects in accordance with the Priority Ranking System (Appendix A2);
3. Funding Lists were prepared by NDEE in accordance with established readiness to proceed criteria; and
4. NDEE developed a DWSRF capitalization grant payment schedule to provide resources for making timely binding commitments to the projects selected for DWSRF assistance.

A. Set-Aside Utilization

The State intends to utilize the authorized set-asides as described in Section I DWSRF Sources and Uses of Funds; see Section I for a narrative description.

B. Identify How Funds Will Be Allocated

The DWSRF Project Priority Funding Lists presents those projects anticipated for funding in the SFY 2022 IUP cycle. Allocation of funds among eligible projects was a multiple step process.

1. NDEE initiated the annual Public Water Supply State Fiscal Year Drinking Water Needs Survey to identify PWSs expressing interest in the DWSRF program and those who wished to be placed in the SFY 2022 DWSRF IUP.
2. The DWSRF Sources and Uses of Funds list identifies levels of funding. The funding allocation was checked to ensure that at least 15% of the funds were allocated to small systems serving fewer than 10,000 persons.
3. The vast majority of the Priority Ranking System developed by NDEE was presented for discussion, comment, and approval at the Governor's appointed Advisory Council on Public Water Supply on June 13, 2019.
4. The IUP was submitted to the Environmental Quality Council for approval on June 15, 2021 in a final public hearing process.

C. Develop DWSRF Payment Schedule for State Capitalization Grant

In order to prepare a Payment Schedule for receiving Capitalization Grant funds, projections were made of binding commitments (e.g., signed loan contract). The information in the funding lists (source and amount of funding) was used to determine the DWSRF Payment Schedule shown below.

DWSRF CAPITALIZATION GRANT PAYMENT SCHEDULE TABLE

Program Funding Cap Grant Year	SFY 2022 1Q FFY 2021 4Q	SFY 2022 2Q FFY 2022 1Q	SFY 2022 3Q FFY 2022 2Q	SFY 2022 4Q FFY 2022 3Q	SFY 2023 1Q FFY 2022 4Q
FFY 2021	\$11,001,000				
FFY 2022					\$13,310,000
Match	\$2,200,200				\$2,662,000

Note: Match will be deposited into the Fund before the State receives capitalization grant payment from EPA.

D. Develop Disbursement (Outlay) Schedule for DWSRF Program Projects

EPA uses this schedule along with the schedules from the other states' programs to project their own cash flow needs. The actual binding commitment (a signed loan contract) will include an anticipated outlay schedule. Schedules from all projects are cumulated to project the DWSRF's total cash flow needs. The DWSRF will disburse all required state match prior to any federal drawdowns from the FFY 2021 grant, except for the set-aside use that occurs without state match payment.

E. Bypass Date and Changes to Project Lists

SFY 2022 Funding List projects will have funds reserved until the bypass date of October 1, 2021. Following the bypass date, DWSRF will offer loan assistance for projects ready to proceed in priority order down the Project Priority Planning List, until all remaining available project funds have been obligated. Priority for forgiveness assistance will be given for projects that protect public health and then for infrastructure replacements projects. However, depending upon the availability of funds, the program may offer forgiveness to any eligible projects in ranked order after the bypass date. Amendments to existing loans can be closed at any time under the original loan agreement terms (except interest rate), unless upgrading to the SFY 2022 program criteria provides a better financing alternative.

Projects that are moving forward but will not be able to close a loan prior to the end of the current SFY will be considered to have obligated funds if the loan applicant has held a public hearing or meeting and/or a Finding of No Significant Impact or Categorical Exclusion has been signed and issued by the NDEE Director. These actions shall be considered to constitute a binding commitment with the community for a DWSRF loan. The binding commitment will expire at the end of SFY 2023. PWSs with binding commitments issued in SFY 2021 will be able to close loans prior to the October 1st bypass dates, under the terms noted in the SFY 2021 IUP (except interest rate) unless the SFY 2022 funding list or bypass criteria provide better financing alternatives before those dates. The PWS may request an extension of one year for the binding commitment if unforeseen circumstances occur and prevent the PWS from closing the loan.

The Director of NDEE can bypass the order of priority projects listed in the IUP to meet critical public health needs resulting from a natural or manmade disaster which may or may not activate the State Emergency Operations Plan, and to prioritize any remaining available funds for eligible drinking water projects.

Land Acquisition, Source Water Protection Area, and Water Meter Projects listed on the SFY 2022 IUP may also be funded in accordance with IUP CWSRF, Section I, Part VII “Source Water Protection Area and Water Meter Projects”. Land Acquisition, Source Water Protection Area, and Water Meter projects may be funded after the CWSRF bypass date, subject to availability of CWSRF funding. In addition, de-chlorination projects listed under the CWSRF ranking list may be funded as DWSRF low-priority projects after the October 1, 2021 bypass date, should funds remain available.

Projects ranked with at least 60 points will be carried forward for up to four years in the IUP if the criteria resulting in the system’s priority ranking remains in effect. All remaining Low Priority status projects will be carried forward for up to four years in the IUP if the system has a Preliminary Engineering Report on file with NDEE.

IV. ADDITIONAL INFORMATION AND REQUIREMENTS

A. Administrative Fees

Nebraska will continue to use the DWSRF Administration Cash Fund to cover administrative program costs this fiscal year. To meet the long term administrative needs of the program, an annual fee of up to 1% may be charged against the outstanding principal on loans. However, the 1% administration fee charged on all loans may be reduced for past DWSRF loan recipients. Up to a 0.25% reduction in fees may be applied on new loans up to the prior borrowed amount, or up to a 0.5% reduction for the communities which have current outstanding loan balances. These fees are not included in the loan principal. Fees collected in addition to principal and interest that are not deposited as loan repayments are considered “income received by the grantee” or “program income.”

An annual administrative fee of 0% may be applied to loans made for emergency projects as defined by Title 131, that serve as bridge financing while a borrower awaits to receive funding from other sources, such as FEMA.

A fee of 0.5% will be assessed on all Planning Loans. For the FFY 2022 Capitalization Grant, it is estimated that administrative fees collected on Capitalization Grant loans that is considered to be program income will amount to approximately \$387,528.

This fee is calculated on a semiannual basis and billed when loan principal and interest payments are due. The fee will be applied to all loans in accordance with Title 131 and the loan agreement. The fee is deposited into an account separate from the DWSRF accounts and is used for administrative costs. The Administration Cash Fund may be used for loan forgiveness and/or planning/source water protection grant funds.

B. DWSRF Market Loan Rates

The DWSRF market loan rate determination procedure is based on the cost of borrowing money for the DWSRF and on public finance market rates. The DWSRF rate is set to the following for the SFY 2022 IUP:

- For loans with terms of 30 years or less, the market rate may be up to 1.5%.
- For loans with terms exceeding 30 years:
 - For Disadvantaged Communities, the market rate may be up to 1.5%.
 - For all other communities, the market rate may be up to 2.0%.

Loans made for emergency projects that serve as bridge financing while a borrower awaits to receive funding from other sources, such as FEMA, will have an annual interest rate of 0%, and the rate for Planning Loans will be set at 0%.

The Director may adjust the rate of interest in response to changing public finance market conditions. The actual interest rate charged on each loan will be determined under the procedures described in Appendix C.

C. Terms

Repayment of loans will generally be based on a level payment amortization schedule with full amortization of a typical loan in 20 years. Terms of up to 40 years are allowed for disadvantaged communities, with a maximum of 30 years for all other systems dependent on the design life of the funded project. Planning Loans will have a term of five years. Several opportunities for changing the loan terms are described under provisions in Appendix C. No prepayment is allowed within the first ten years of the loan term if the loan recipient has received Forgiveness assistance.

D. Financial Status of DWSRF

Estimate as of March 1, 2021

Since 1997, the EPA has provided the State 24 federal capitalization grants totaling \$216,218,931 and an ARRA grant for \$19,500,000. The State, in turn, provided \$43,243,786 from cash, general funds, and bond proceeds to meet the 20% match requirements. The DWSRF has \$86,670,899 in outstanding loans and \$17,450,132 in loan and forgiveness obligations.

Administrative expenses of the DWSRF program are paid out of fees charged on loans. Loan fees are deposited in the DWSRF Administration Cash Fund. The program collected \$802,474 fees in SFY 2020, and incurred \$412,489 in expenses for program administration. The DWSRF Administration Cash Fund balance is \$911,264. Administrative Cash Fee collection in SFY 2022 will decrease to \$665,718, and program administration expenses should decrease to \$527,807.

Capitalization grants from federal appropriations provided prior to FFY 2019 are entirely expended. The 2%, 10%, and 15% set-asides from future grants will be used as described in Part I of Section II. DWSRF Sources and Uses of Funds. Set-aside balances are shown in the following table.

Set-Aside Balances TABLE

CAPITALIZATION GRANT	2% SET-ASIDE	10% SET-ASIDE	15% SET-ASIDE	LOANS	BALANCE
2019	\$0	\$896,614	\$435,772	\$0	\$1,332,386
2020	\$200,541	\$1,018,756	\$697,459	\$5,809,144	\$7,725,900

E. Emergency Grant Assistance

Applications for emergency grant assistance in the case of catastrophic failure of the PWS or unforeseen threats of contamination to the source water supply will be considered by the Department in accordance with Nebraska Revised Statute §71-5322 (10). NDEE may provide funding for emergency projects, including assistance for planning, at any time, subject to availability of funds and notwithstanding the adopted Funding Lists. It must be documented that the emergency jeopardizes the PWS's ability to provide an adequate supply of safe drinking water on a continuous basis. Approval of the project to resolve the emergency must be obtained from NDEE Director.

F. Amendments to the IUP

Amendments to the IUP may be adopted by the EQC after a public notice and comment period.

NDEE may vary from the IUP without additional public participation when/if:

- It is determined to be minor; or
- It is in line with the bypass provisions; or
- An emergency assistance need is realized; or
- Unanticipated additional funds become available for loans and grants, such as through a stimulus program focused on improving water infrastructure.

Any changes such as these may be reported in the Annual Report to EPA.

G. Audit and Reporting, EPA, and Environmental Requirements

Nebraska's DWSRF is committed to transparency and accountability. Program information noted in Intended Use Plans, Annual Reports, and other program materials are available upon request. The current IUP is also posted on NDEE's website (<http://DEE.ne.gov>). Project milestones and information are reported to EPA through the Project and Benefits Reporting (PBR) database and the Drinking Water SRF National Information Management System (DWNIMS). A new EPA database for NIMS reporting will be rolling out August 2021. Further, an independent audit of the program is conducted annually by the State's Auditor of Public Accounts office. Finally, projects with estimated costs of \$25,000 or greater that receive federal funds are subject to reporting under the Federal Funding Accountability and Transparency Act (FFATA), per EPA issued guidance. Beginning with the FFY 2011 Capitalization Grant, FFATA ensures that the public can access information on all recipients through <https://www.usaspending.gov>.

It is the program's intent to assist as many projects from the SFY 2022 Funding Lists (Appendix B2) as possible with the loan and forgiveness funds. Fifteen percent (15%) of total funds available shall also meet the requirements for small system priority as established in the Federal statute and discussed in the NDEE's Priority Ranking System (Appendix A2).

NEPA-like environmental review requirements, Federal cross cutting authorities, FFATA, signage, and sub-recipient monitoring requirements associated with the receipt of more than \$750,000 in federal funds from any source during the fiscal year may be assigned to several projects where an equivalent amount of the capitalization grant is disbursed. For the current IUP cycle the communities of Chadron, Crete, Fullerton, Kearney, Minden, McCook, and Wakefield will be the targets for these requirements.

All DWSRF projects with funds directly made available by Capitalization Grants must comply with the Federal "cross-cutting" authorities, which are Federal laws and authorities that apply by their own terms in Federal financial assistance programs. All projects are also required to undergo a State Environmental Review Process, and are required to comply with the Civil Rights Act of 1964 and related anti-discrimination laws.

EPA's appropriations require the application of Davis-Bacon prevailing wage rates to all projects funded in whole or in part by the DWSRF. Davis-Bacon applies to construction contracts over \$2,000 and their subcontractors (regardless of subcontract amount). To ensure compliance with these requirements, NDEE will confirm that the correct wage determinations are being included in the bid specifications and/or construction contracts. NDEE will also provide assistance recipients with the specific EPA Davis-Bacon contract language that is to be included in bid specifications and/or contracts, and forms for the recipient to document compliance with the Davis-Bacon provisions based upon a review of weekly payrolls.

The Water Infrastructure Improvements for the Nation Act (Public Law 114-322) includes Water System Assessment requirement (Section 2108) that any public water system serving 500 or fewer persons seeking funding from the DWSRF shall self-certify that they have considered an alternative drinking water supply from a drinking water delivery system sourced by publicly owned (1) individual wells, (2) shared wells and (3) community wells. This has long been, and will remain, a requirement of Nebraska's DWSRF program through the sharing of services (regionalization) alternative evaluation in preliminary engineering report evaluations.

The America's Water Infrastructure Act of 2018 (Public Law 115-720) includes an "American Iron and Steel (AIS)" requirement that requires the DWSRF assistance recipients to use iron and steel products that are produced in the United States for projects for the construction, alteration, maintenance, or repair of a public water system or treatment works if the project is funded through an assistance agreement executed before September 30, 2023.

H. Disadvantaged Community

Additional assistance for Disadvantaged Communities through loan forgiveness will utilize the Affordability (Disadvantaged) Criteria provided in Appendix F. Additional assistance of loan terms up to 40 years will be available to communities which have a Median Household Income (MHI) less than or equal to 120% of the State MHI, using the 2014-2018 American Community Survey (ACS) data set published by the U.S. Census Bureau. The community may also complete an income survey and submit the results to the NDEE for review.

Forgiveness funds will be targeted to the highest priority eligible projects on the Priority Funding List until all designated funds are obligated. The SFY 2022 program will rely on the existing disadvantaged community forgiveness criteria, except that a policy change to a 30% forgiveness ceiling amount dependent in part on system population and project type, will be in effect for allocating all of the FFY 2020 and 2021, and if awarded, FFY 2022 funds to public health and infrastructure replacement projects, and if funds remain, to those in accordance with the bypass process (See Appendix A2).

In a separate stand-alone category, forgiveness funding as part of a sponsorship program may be offered to all DWSRF funded projects that include a new water supply well(s) phase or rely on innovative planning to avoid a water treatment alternative. If a community is pursuing a treatment alternative with DWSRF funding, they may submit a plan prepared by a professional engineer based upon innovative techniques that could help the community avoid implementing the treatment alternative as a means of returning to compliance. The plan may be eligible for reimbursement through forgiveness funding up to a 30% level, should it be determined the plan is acceptable to NDEE.

Exceptions to all the above: up to a 50% forgiveness amount may be extended to those systems that need to implement projects as a result of an emergency or that intend to supply water to another system to address that system's Administrative Order.

V. DWSRF GRANTS

The following sections apply for the set-aside funding authorized under past Capitalization Grants that are specifically noted for the planned FFY 2021 set-asides, and should the FFY 2022 Capitalization Grant become available during SFY 2022. The exception is for Planning Grants and the study on workforce development, which will be out of the Administration Cash Fund.

A. PWS Security Grants

PWS Security Grants activity may be funded with up to \$275,000. The intent of this grant is to provide funds to public water systems (PWSs) serving a population of 10,000 or fewer to improve the security of public water supplies. Eligible PWSs must:

1. Be a political subdivision with a population of 10,000 or fewer;
2. Have a Public Water System Emergency Response Plan that has been approved by NDEE;
3. Have attended a workshop regarding potential biological, chemical, and terrorism threats that affect PWS; and
4. Provide a 10% match to improve the protection of PWSs.

The maximum amount of each grant is \$10,000. The PWS Security Grant may include, but is not limited to, installing alarm systems, hardened locks, fencing, lighting, sampling stations, ect. The grants will be funded on a first come first serve basis. NDEE may send a letter to all eligible PWSs on or shortly after July 1, 2021, advising the PWSs of the availability of the grants and the application process. The work plan submitted to EPA for the Capitalization Grant for the PWS Security Grant activity may include some costs for program administration.

B. Planning Grants

Planning Grant activity may be funded with \$100,000, as noted, from the Administration Cash Fund. Planning Grants are intended to provide financial assistance to PWSs for PERs for projects seeking funding through the Water Wastewater Advisory Committee (WWAC) common pre-application process. The WWAC Common Pre-application is provided in Appendix F. Any award of such a grant to a PWS shall contain a requirement that the PER be submitted to the NDEE for review and approval. Planning grants shall be awarded to PWSs based upon one the following criteria:

1. The PWS has received an Administrative Order or other enforcement action through NDEE;
2. The PWS is a single well system due to the loss of a production well(s) to avoid an Administrative Order or other enforcement action through the NDEE;
3. The PWS is a multiple well system and has lost two or more production wells to avoid an Administrative Order or other enforcement action through the NDEE; or
4. All remaining PWSs that have projects that have have been out of compliance with a drinking water standard for over a year and/or have been issued an administrative order (AO).

To qualify for a Planning Grant, a PWS must meet the following criteria:

1. Their project must be listed on the DWSRF IUP Priority Planning List; and
2. The applicant must be a political subdivision with a population of 10,000 or fewer.

The grant will be up to 90 percent of the PER and other eligible costs, and will require 10 percent matching funds from the PWS; however, such grant is not to exceed a maximum of \$20,000 in federal funds.

Regional Planning Grants will be provided where a Regional PWS, either existing or proposed, will have a project that will address present or prevent future violations of health-based drinking water standards and the regional PWS will not be privately owned. The proposed Regional PWS will have their project on the Priority Planning List or will supply water to a PWS that has a Priority Planning List project to qualify for funding. To be eligible for a Regional Planning Grant, the initial scope of a Regional PWS must be to provide a supply of potable water to a minimum of three community PWSs. Regional Planning Grants will be up to 80 percent of the cost of the PER, or other eligible costs, and will require 20 percent matching funds from the PWS; however, such grant is not to exceed a maximum of \$24,000 in federal funds. If applicable, Regional Planning Grants will be ranked based on the ranking of the PWSs that will be supplied water by the regional system.

C. Source Water Protection Grants Program

Source Water Protection Grant activity will be funded with \$150,000. Source Water Protection Grants will be for proactive projects geared toward protecting Nebraska's drinking water supplies and will address drinking water quality, quantity, and/or education.

Eligible applicants are political subdivisions with a population of 10,000 or fewer, which operate a PWS. The Request for Proposal (RFP) for these grants is issued in the spring of each year. Previous grantees and other eligible applicants are sent notices and the RFP can be viewed online at <http://DEE.ne.gov>.

Eligible projects are designed to provide long-term benefits to drinking water quality or quantity, or the education of the public using the water system. Grants cannot be used to purchase land or for the sole purpose of developing a Source Water or Wellhead Protection Plan.

D. Workforce Development Study

An aging workforce in utility operations is a challenge that all public water systems face in the State of Nebraska and nationally. Attracting workers to small communities continues to be a challenge with the movement of jobs and populations to urban centers. Funding will be provided from the program's administration cash fund to assist community water systems in recruiting operators to be trained by the existing water operator, a circuit rider, or another Nebraska certified system operator of equivalent grade. Prioritization will be given to systems serving populations less than 5,000, and those in areas where a military veteran or their spouse has expressed interest in working, and who has completed the necessary free course(s) towards certification. Other applicants will also be considered to help fulfill a community's needs, and a pool of potential applicants will be retained to assist communities in finding certified operators. The Drinking Water and Ground Water Division will work as a liaison between newly certified operators and communities in need. It is anticipated that this will be a three to four year project, followed by a report prepared by the State Drinking Water Division which outlines the effectiveness of this workforce initiative.

E. New and Innovative Technology Grant (NIT Grant)

NDEE would like to ensure projects which introduce noteworthy innovations in technology that advances the drinking water, wastewater, and nonpoint source profession are recognized and supported. An additional subsidy may be available for these potential innovations. Examples include projects that explore and elevate the drinking water quality and wastewater treatment standards and challenge the current institutional approaches to water treatment and technology. Projects will adhere to eligibility requirements and regulations as other SRF grant programs. No more than \$1,000,000 shall be used for the NIT Grant as long as funds are available and are not part of any set-aside; thereby if these funds are available they may also be used for DWSRF loans if needed.

F. Rural Leak Detection On-the-Ground Study

As noted above, the NDEE will be working with a private entity to develop satellite-based mapping of potential water distribution system leakage in rural Nebraska. Those mapped results of Points of Interest (POI) will be sent to the communities covered by the satellite survey. On-the-ground field surveys will be needed for a comparison of POIs to identify where leaks are located for repair. Rural Leak Detection grants will be funded up to \$100,000, wherein funds will be provided to communities to hire a contractor and/or circuit rider to identify leaks in accordance with approved workplans.

DWSRF RANKED PROJECT PRIORITY FUNDING LIST

PROJECT RANK	PRIORITY POINTS	PUBLIC WATER SYSTEM	PWS NUMBER	POP.	PROJECT DESCRIPTION	ESTIMATED PROJECT COST	PRINCIPAL FORGIVENESS %	FORGIVENESS AMOUNT
1	FNSI	BEATRICE, CITY OF	NE3106705	12549	New Blending Wellfield due to Nitrates w/Transmission Main, Replace Mains & Backup Power	\$7,500,000	0.00%	\$0
2	FNSI	BRADSHAW, VILLAGE OF	NE3118704	273	Replace Standpipe, Rehab Wells & Loop Mains	\$1,150,000	25.00%	\$287,500
3	FNSI	CRETE, CITY OF	NE3115104	6960	Replace Mains, New Well & Rehab WTP	\$3,860,000	15.00%	\$579,000
4	FNSI	EMERSON, VILLAGE OF	NE3104305	840	Replace WTP due to Manganese, Repaint Tower & Replace Meters	\$2,760,000	25.00%	\$690,000
5	FNSI	FIRTH, VILLAGE OF	NE3110912	590	WTP due to Selenium, Replace Well, Mains & Meters	\$2,200,000	25.00%	\$550,000
6	FNSI	FULLERTON, CITY OF	NE3112503	1307	Replace Wells due to Selenium	\$915,000	25.00%	\$228,750
7	FNSI	HAY SPRINGS, CITY OF - SFY 2021	NE3116102	570	New Well, Rehab Tank & Replace Meters	\$655,500	20.00%	\$131,100

60	MCCOOK, CITY OF	NE3114504	7698	\$50,000
Total - Land Acquisition and Source Water Protection				\$4,390,000

APPENDIX A1

CWSRF Project priority ranking system

The State is responsible for the determination of priority given to the construction of publicly owned treatment works and preparation of a State Project Priority List under Title II, Section 216 of the federal CWA.

The Priority Ranking System shall be used to rank the projects on the State Project Priority List. Priority ranking for the projects utilizes the following eight categories to determine total points awarded. The greater the total number of points, the higher the ranking. When necessary, a tiebreaker as described later, is used. Communities that were in mid-process will be automatically carried forward from the prior year. Although ranked with zero priority points, all late survey submissions may still be eligible for funding after the bypass date.

CATEGORY 1. PROJECT BENEFIT

This category incorporates several factors, including the type of project and the relative level of the impact on the environment. Points for only one benefit are awarded. When a project has more than one significant benefit, the benefit with the highest point value is used. In addition to the priority points awarded according to the following schedule, projects receive five supplemental benefit priority points for regionalization if the project includes the consolidation of wastewater collection and treatment systems owned and operated by two or more communities.

Benefit:	System Code:	Priority Points:
Elimination of raw or primary waste discharge	A	35
Separation of combined sewers	B	35
Public health benefit by elimination of frequent sewer backups or septic tank system – drinking water well spacing conflicts	C	35
Municipal wastewater collection and treatment system to replace on-site treatment systems	D	30
Remediation or protection of drinking water supply in zone of influence of municipal well field	E	30
Replacement or upgrade of wastewater treatment system to assure compliance with secondary treatment standards (Total Suspended Solids (TSS) and Biological Oxygen Demand (BOD))	F	30
Disinfection of wastewater effluent	G	25
Replacement or upgrade of wastewater treatment system to meet water quality based permit limits (Ammonia, E-coli & PH)	H	25
Remediation of ground water at landfill site	I	25
Sludge stabilization	J	25
Storm water management	K	20
Addition or repair of wastewater collection system or lift station	L	20
Beneficial reuse (Gray water reuse, land apply line, & equipment, etc...)	M	20
Water quality enhancement for a Nonpoint Source project	N	20
Water conservation	O	15
Other benefits	P	5

CATEGORY 2. BENEFICIAL USE AND CLASSIFICATION OF RECEIVING WATERS

This category addresses receiving water that is currently impacted or has the potential to be impacted by existing situations, and that would be enhanced or protected by the proposed project. Points for only one beneficial use or one ground water classification are awarded. The applicable use or classification with the highest point value is utilized. Some projects may impact both surface water and ground water, but only the primary receiving waters are considered. Wastewater treatment and collection systems to replace existing septic tank systems, will use the ground water classification for point allocation, unless there is documentation of extensive discharges to surface waters. Improvements to existing complete retention lagoons will use the assigned use of the stream that is being protected for point allocation, unless the problem is excessive seepage rather than inadequate capacity. Sludge stabilization, sewer, and lift station project point allocation is based on the assigned use of the stream that receives or could receive the effluent discharge. Sewer projects that eliminate the need for septic tanks are allocated points based on the ground water classification.

Assigned Beneficial Use of Surface Water:	System Code:	Priority Points:
Class A and Class B State Resource Waters	Q	25
Public Drinking Water	R	25
Recreation	S	20
Class A – Cold Water Aquatic Life (Flows all year)	T	10
Class B – Cold Water Aquatic Life (Seasonal flow)	U	10
Class A – Warm Water Aquatic Life	V	10
Class B – Warm Water Aquatic Life	W	5
Ground Water Classification:		
GA (public system)	X	25
GB (individual system)	Y	15

Classifications come from definitions in Nebraska Titles 117 and 118.

CATEGORY 3. WATER QUALITY OF RECEIVING WATERS

The quality of water in the receiving stream or aquifer is another factor in project prioritization. Priority is given to projects potentially impacting bodies of water that have been degraded by pollutants and are impaired for one or more assigned beneficial uses. Neither the specific source of these pollutants causing the impairment nor the specific impact of the potential project is considered in this assessment.

Some projects may impact both surface water and ground water, but only the primary receiving waters shall be considered. The projects that primarily impact surface waters are those projects that received priority points for Assigned Beneficial Use of Surface Water in Category 2. The projects that primarily impact ground water are those projects that received priority points for Ground Water Classification in Category 2.

An assessment of the quality of water in surface water bodies to support assigned beneficial uses is presented in the current Surface Water Quality Integrated Report. This report includes a list of water bodies that are not supporting assigned beneficial uses due to impacts of one or more pollutants, commonly referred to as the Section 303(d) List. Projects that primarily impact surface waters are awarded priority points if the water body that receives or could receive the wastewater discharge is listed in the report as having one or more beneficial uses impaired by one or more pollutants. Water bodies impaired by natural causes or conditions are not awarded priority points.

Pollution can also impact ground water and make it unfit for some uses. Watersheds were evaluated for ground water quality impairment for the Nebraska Unified Watershed Assessment. This evaluation considered contamination by nitrate and pesticides and administrative orders and notice of violations for public drinking water supplies issued by the Department. The SRF program will utilize information obtained from the Nebraska Water Quality Management Report, as prepared in accordance with Neb. Rev. State Statute 46-1304, and use the information to award additional points using the following assessment:

Indication of Water Quality Impairment	System Code	Priority Points
Water Body Assessment Category Listed in Surface Water Quality Integrated Report		
Category 4A or 4B	Z	20
Category 5	AA	20
Nebraska Unified Watershed Assessment, Ground Water Quality Resource Component Weighted Value		
100 Points	BB	20
50 Points	CC	10

CATEGORY 4. ENFORCEMENT ACTIONS

This category addresses enforcement actions initiated by the Department of Environment and Energy to address violations of the Environmental Protection Act and other related acts. Points are awarded for a project if the project can reduce or prevent future violations and essentially satisfy the enforcement action.

Enforcement Action	System Code	Priority Points
Consent Order	DD	25
Administrative Order or EPA Orders	EE	25
Referral to Attorney General	FF	25
Compliance Schedule in NPDES Permit	GG	20
Notice of Violation or EPA 308 Letter	HH	15

CATEGORY 5. READINESS TO PROCEED

This category addresses the status of project planning, preparation of plans and specifications, and readiness to proceed with project construction.

Project Status	System Code	Priority Points
Construction Permit Issued	II	60
Plans and Specifications Submitted to NDEE	JJ	50
Finding of No Significant Impact (FNSI) or Categorical Exclusion (CatEx) Issued	KK	40
Facility Plan Submitted to NDEE	LL	25

CATEGORY 6. POPULATION

This category addresses the existing populations to be served by the proposed project. The population is also an indication of the relative magnitude of the impact on the environment that is addressed by the proposed project. If the facility serves the entire community, the population shall be taken from the latest official census. If the facility serves only a part of the community, an estimate of the existing population served shall be used. Estimates of the population previously served shall be used for projects relating to facilities no longer in service, such as remediation of closed landfill sites.

<u>Population Served</u>	<u>Priority Points</u>
50,000 or Greater	10
10,000 - 49,999	8
5,000 - 9,999	6

<u>Population Served</u>	<u>Priority Points</u>
2,500 - 4,999	4
800 - 2,499	2

CATEGORY 7. ASSESSING WASTEWATER INFRASTRUCTURE NEEDS (AWIN)

This category addresses a community's sustainability risk to afford infrastructure projects in the future through the use of the AWIN Sustainability Model developed by NDEE. The AWIN Sustainability Model is a probability model that evaluates and scores a community based on the community's population trends, economic status, and resources. The low-risk range includes communities likely to have sustainable growth and needs little additional help. The moderate-risk range is comprised of communities with uncertain growth potential requiring further evaluation to determine the need for additional assistance. The high-risk range includes those communities that may need additional assistance to bring them into compliance without causing undesired financial stress.

<u>Sustainability Risk:</u>	<u>Priority Points</u>
High	25
Moderate	15
Low	0

CATEGORY 8. FINANCIAL IMPACTS

This category addresses the financial impact of the proposed project on the users that will provide the revenue to repay the loan. Priority points are awarded according to the annual cost of the loan per person as a percentage of the Median Household Income (MHI) of the community from the American Community Survey five-year average. A 20-year loan shall be assumed with the interest rate based on the existing SRF market rate and rate system and MHI of the community.

<u>Annual Loan Costs Per Person as a Percentage of Median Household Income</u>	<u>Priority Points</u>
Greater than 0.2 Percent	10
0.05 to 0.2 Percent	6
Less than 0.05 Percent	2

TIEBREAKER

Two or more projects may receive the same total priority points on the IUP project list. Although communities are informed when there is doubt about funding availability, in projects with the same priority point total, ties are broken at first appearance. The priority of these projects is reviewed as they proceed to bid opening. Ties are broken by consideration of enforcement actions, specific provisions of the permit issued for the facility, and inclusion of the project as an integral part of a designated surface or ground water project established under state or federal law. The following table shall be used to break ties:

<u>Factor</u>	<u>Priority</u>
Enforcement Action	Higher
Compliance Schedule in Discharge Permit	↕
Project is Part of a Designated Water Quality Project	↕
None of the above factors	Lower

If consideration of the above factors does not break the tie, priority shall be based on the annual loan cost per person as a percentage of the median household income. The project with the higher percentage, shall have the higher priority.

APPENDIX A2

DWSRF PRIORITY RANKING SYSTEM

1. Scope and Purpose. The Drinking Water State Revolving Fund Act §§71-5314 to 71-5327 requires that loans shall be made to eligible public water systems (PWSs) for eligible projects. The purpose of the priority ranking system is to establish a list of eligible projects to be funded in such a manner that priority for the use of the Drinking Water Facilities Loan Fund or the Land Acquisition and Source Water Loan Fund will be given to projects that (A) address the most serious risk to human health; (B) are necessary to ensure compliance with the Title 179, Public Water Systems; and (C) assist systems most in need, on a per person basis according to the affordability criteria.

Ineligible PWSs and ineligible projects will not be evaluated for priority points. For this fiscal year, an exception was made from the policy wherein late survey submissions are typically ranked with zero priority points, as there has been an increased amount of EPA funding authorized for the program. Late surveys received before the public notification for the Environmental Quality Council (EQC) meeting were ranked following the system below.

One change is proposed to the ranking system. Manganese was added under 1.b.

2. DWSRF Priority Ranking System.
 - a. Priority Ranking System for the Use of the Drinking Water Facilities Loan Fund. The following DWSRF priority ranking system shall be used to rank the projects on the DWSRF IUP priority lists for the use of the Drinking Water Facilities Loan Fund. Priority ranking of projects will be based on total points awarded for the following three categories. Points for only one benefit in each category shall be awarded; when a project has more than one significant benefit, the benefit with the highest point value shall be used. The greater the total number of points, the higher the ranking. The ranking will be done, and the priority lists prepared annually, before IUP drafting.
 - i) Health or Capacity Development Benefit Provided by Project. This category incorporates the type of project and the level of benefit to human health, or improvement to the PWS. These projects are for the development, construction or modification of the PWS to ensure compliance with the requirements of the Nebraska Safe Drinking Water Act (NSDWA) and the regulations adopted thereunder.

<u>Health or Capacity Development Benefit</u>	<u>Priority Points</u>
1. <u>Maximum Contaminant Level (MCL)/Treatment Technique Requirements.</u> Maximum allowable levels are established for those parameters which may be detrimental to public health. Detected contaminant levels in excess of 80% of the MCL within the past 4 years may qualify the project for ranking under this category.	
a. Concentration of a contaminant or duration of exposure may lead to the potential for life-threatening acute health effects (ex. high nitrates and methemoglobinemia in babies) or irreversible chronic effects (ex. high lead and neurological impairment in children). Detected concentration of a contaminant at 80% of its MCL or ACL within the past 4 years may qualify for ranking or,	130
b. The contaminant is a carcinogen and it has been detected at 80% of its MCL within the past 4 years may qualify for ranking, or	115
c. Concentration of a contaminant or duration of exposure may be associated with non-life-threatening or reversible adverse long-term health effects (ex. excess chlorine and eye/nose irritation and stomach discomfort) and it has been detected above its MCL within the past 4 years may qualify for ranking.	100

<p>2. Critical Capacity Development. These projects would be for the development, construction or modifications of the public water system to correct major deficiencies relating to the Design Standards in Title 179 NAC 2-007. Projects include:</p> <ul style="list-style-type: none"> • Backup Wells/Sources for single Well PWSs • Replacement of significantly aged or deteriorated major infrastructure, including Wells and Storage. The eligibility of a project for assignment of this priority point subcategory will be made at the discretion of the Program Administrator. 	85
<p>3. Sustainability Factors. These projects would address upgrade to and/or the replacement of existing major infrastructure, such as:</p> <ul style="list-style-type: none"> • Supply Wells, Ground or Elevated Storage • Major Treatment Plant Renovations • Major Distribution System Replacement projects (Replacement project phases are at least a minimum of 50% of the overall project cost) 	55
<p>4. Secondary Contaminant Level (SMCL). Recommended maximum levels are set for parameters which are not harmful to health but make the water undesirable for use. Project would enhance water quality and include disinfection.</p>	40
<p>5. System Design Deficiencies. These projects would be for the development, construction or modifications of the public water system to or prevent deficiencies relating to the Design Standards in Title 179 NAC 7. Projects would address:</p> <ul style="list-style-type: none"> • Inadequate source capacity • Inadequate distribution pressure/storage 	25
<p>6. Other Factors. These projects would address other water supply system concerns such as:</p> <ul style="list-style-type: none"> • Replacement or rehabilitation of other minor system components that are aged and/or have exceeded design life • Controls/automation to improve operational efficiency • Security measures and/or Standby Power • Chlorine and/or Fluoride Feed Systems 	10

- ii) **Financial Impacts.** This category addresses the financial impact of the proposed project on the users that will provide the revenue to repay the loan. Priority points are awarded according to the annual cost of the loan per person as a percentage of the median household income (MHI). A 20-year loan shall be assumed with the interest rate based on the minimum effective interest rate of the DWSRF Program.

Annual Loan Costs Per Person as a Percentage of Median Household Income	Priority Points
Greater than 0.8 Percent	45
Greater than 0.6 to 0.8 Percent	35
Greater than 0.4 to 0.6 Percent	25
Greater than 0.2 to 0.4 Percent	15
Less than or equal to 0.2 Percent	5

- iii) **Enforcement Action.** This category addresses compliance with Title 179 drinking water standards and/or the enforcement actions taken requiring the system to address the deficiencies/water quality concerns that contribute to noncompliance, or any drinking water project needed as a result of an NDEE enforcement action.

Enforcement Action	Priority Points
Administrative order issued/other enforcement action taken relating to design/infrastructure deficiencies/water quality or discharge concerns/etc. addressed by the proposed project.	25

- iv) **Readiness to Proceed.** This section addresses establishing the Priority Funding List per the status of a PWSs project, assessing the readiness to proceed within SFY 2022. The criteria that was utilized in establishing the Priority Funding List are as follows:

- (1) PWS with a Finding of No Significant Impact (FNSI) or Categorical Exclusion (CatEx) issued by the program; with priority over,
- (2) Status of Plans and Specifications (P&Ss) – P&Ss for Ranked Project prepared or under contract for design; with priority over,
- (3) Status of Engineering Report with Test Hole – Report for Ranked Project has been prepared and, if applicable, a Test Hole has been completed; with priority over,
- (4) Status of Engineering Report – Report for Ranked Project has been prepared, first and/or where additional ranking preference may be given to those projects with demonstrated readiness to proceed.

In the above-listed order, preference shall be first given to placing those High Priority PWSs/projects in ranked order on the Priority Funding List. Where such projects in a sufficient number do not exist, readiness to proceed criteria 2 through 4 shall be repeated for Low Priority PWSs/projects. Where ties in ranking points occur, the projects are ranked in descending order per the established tiebreaking criteria in Section 4 below. The intent of the Readiness to Proceed criteria is to identify those projects most likely to receive funding in the coming fiscal year based upon the information provided by the PWSs (or their Engineers). A limited comprehensive bypass may also be developed using the above-listed criteria, should additional funds become available during the fiscal year.

Two exceptions are made to the above-listed criteria. First, those projects that have been obligated or offered better funding through another Federal (USDA-Rural Development) or State (NDED-CDBG) infrastructure funding program will not be included on the Priority Funding List. Second, those PWSs that have turned down or passed on better funding offers from the DWSRF for the listed project in past fiscal years. During the public participation process (i.e., EQC IUP approval), those systems will still be included on the Priority Planning List, and can request in writing placement on the Priority Funding List at any time, should that PWS disagree with NDEE proposed ranking.

- b. Priority Ranking System for the Use of the Land Acquisition and Source Water Loan Fund. The following priority ranking system shall be used to rank the projects on the DWSRF IUP project list for the use of the Land Acquisition and Source Water Loan Fund. Priority ranking for the projects is based on total points awarded for the following three categories. Points for only one benefit in each category shall be awarded; when a project has more than one significant benefit, the benefit with the highest point value shall be used. The greater the total number of points, the higher the ranking.
 - i) Health Benefit Provided by Project. This category incorporates the type of project and the level of benefit to human health. These projects are for the acquisition of land or a conservation easement to protect the source water of the system from contamination and to ensure compliance with the NSDWA and Title 179.

<u>Health Benefit</u>	<u>Priority Points</u>
1. <u>Acquisition of Land or a Conservation Easement to Protect the Source Water of the System from Contamination.</u>	
a. Acute Health Effects	
i) Microbiological/Nitrate	40
b. Chronic Health Effects	35
2. <u>Community Water System Implementing Voluntary Incentive Based Source Water Protection Measures.</u>	
a. Acute Health Effects	
i) Microbiological/Nitrate	40
b. Chronic Health Effects	35

- ii) **Financial Impacts.** This category addresses the financial impact of the proposed project on the users that will provide the revenue to repay the loan. Priority points are awarded according to the annual cost of the loan per person as a percentage of the MHI. A 20-year loan shall be assumed with the interest rate based on the minimum effective interest rate of the DWSRF Program.

Annual Loan Costs Per Person as a Percentage of Median Household Income	Priority Points
Greater than 0.4 Percent	25
0.2 to 0.4 Percent	15
Less than 0.2 Percent	5

- iii) **Enforcement Action.** This category addresses compliance with Title 179 drinking water standards and/or the enforcement actions requiring the system to address the issues that contribute to noncompliance.

Enforcement Action	Priority Points
Administrative order issued/other enforcement action taken relating to source water protection addressed by the proposed project.	25

3. **Service Meters.** Water service meters will be required as a part of the project, if the water system does not have service connections individually metered.
4. **Tiebreaker.** Two or more projects may receive the same total number of priority points on the IUP project list. Ties shall be broken only when (A) two or more projects receive the same total of priority points based on the above three categories, (B) the environmental reviews have been completed, (C) the systems are ready to sign the loan contracts, and/or (D) adequate funding for all these projects is not available. The status of the plans and specifications will be considered first in breaking the tie. Projects with plans and specifications approved by the Department shall have a higher priority than those projects with plans and specifications currently in the Department's review and approval process. For projects with a similar status of plans and specifications, as approved, the project with a higher annual loan cost per person as a percentage of the MHI shall have the higher priority. This last tiebreaking criterion is critical in establishing the projects to be included on the prioritized Funding Program Lists.
5. **Small System Priority.** Fifteen percent of the total funds available for the loan shall be earmarked for systems serving fewer than 10,000 persons. In addition, priority ranking for funding small systems will be given over medium systems or systems with MHI's greater than 120% to meet the expected EPA grant requirement of not less than 20% up to 55% of additional subsidization for the FFY 2019/2020 and the pending FFY 2021 grant.
6. **Affordability (Disadvantaged) Criteria.** The purpose of the affordability criteria is to determine which of the projects receiving funds from the DWSRF may also qualify for financial assistance beyond the ordinary benefits available through the DWSRF. Eligible PWS may qualify for additional financial assistance if their population is equal to or less than 10,000 people with an MHI less than 120 (one hundred twenty) percent of the state MHI.

All High Priority PWSs ranked for funding in SFY 2022 will be eligible for loan forgiveness at an estimated percentage not to exceed 30% of project costs or the maximum percent listed in the IUP based on the PWSs MHI. Typically those include PWSs under an Administrative Order (A.O.) or any PWS which is a single well system due to the loss of a production well(s) to avoid an A.O. or other enforcement action within the past five years, or any PWS that is a multiple well system and has lost two or more production wells to avoid an A.O. or other enforcement action within the past five years may be eligible, should forgiveness funding remain available. Information on the financially disadvantaged assistance program, the extent of the availability of such disadvantaged funds for this program, and the disadvantaged determination criteria are included in Section I of the IUP. Systems that meet the minimum disadvantaged criteria determination are also eligible for extended loan terms up to 40 years.

The factor of population will be carried throughout the funding of priorities. Is capped per MHI disadvantaged criteria and the following tiered system:

Public Health Projects

- i. Population of 10,000 or less – Capped at 20%
- ii. Population of 3,300 or less – Capped at 25%
- iii. Population of 500 or less – Capped at 30%

Low Priority Projects ranked with a Sustainability Factor, or greater

- 1) Population of 10,000 or less – Capped at 15%
- 2) Population of 3,300 or less – Capped at 20%
- 3) Population of 500 or less – Capped at 25%

APPENDIX B1

CWSRF PROJECT PRIORITY PLANNING LIST

Funding List	Priority Points	Community	ACS 2014-2018 Est. MHI	NPDES ID#	US Census 2010 Est. POP	Project Description(s)	Project Est. Cost	SRF Est. Funding
	32	Abie	\$69,500	NEU132659	69	GPS locate and map all sewer man holes and clean outs \$2,000	\$2,000	\$2,000
	7	Adams	\$42,083	NE0045055	573		\$0	\$0
	88	Ainsworth	\$41,064	NE0112267	1,728	Main Street DOT project sanitary main, services, and manholes \$1,500,000	\$1,500,000	\$1,500,000
	79	Albion	\$51,818	NE0026573	1,650	Replace upgrade manholes; \$50,000; Extend sewer lines \$50,000; CIPP sewer mains \$100,000	\$200,000	\$200,000
	60	Alda	\$52,813	NE0042056	642	Sewer main improvements (CIPP, rehab MHs, etc.) \$ 500,000; Lagoon improvements (bank stabilization) \$150,000; Lift station improvements (replace low grade water systems) \$300,000	\$950,000	\$950,000
	81	Alexandria	\$42,500	NE0029238	177	Sewer CIPP lining \$50,000	\$50,000	\$50,000
	66	Allen	\$50,000	NE0031241	377	Sewer main repair and replacement \$100,000; Sewer Lift Station repair \$75,000	\$175,000	\$175,000
	34	Alma	\$50,057	NE0041335	1,133	Sludge removal \$100,000; Sewer main repairs - \$50,000; Manhole rehab \$50,000	\$200,000	\$200,000
	90	Amherst	\$57,750	NE0112992	248	Lagoon expansion, force main and lift station, effluent land application option, collection system repairs \$2,400,000	\$2,400,000	\$2,400,000
	37	Ansley	\$57,750	NE0043249	441	Sewer main improvements and study \$60,000; Line main that goes under railroad tracks \$20,000	\$80,000	\$80,000

(1), (2), (3), (4) CW Needs Survey can be carried forward for up to four years if the project is in process. The number behind the community name indicates the number of years it has been carried forward from the prior year(s).

Behind the priority points indicates communities that were in mid-process and therefore were carried over from the prior year.

F – Identifies projects that are a part of the IUP Funding List.

GPR - Identifies projects that are a part of the IUP Green Project Reserve Funding List.

2010 U.S. Census - Bureau estimated resident population, published by American Fact Finder.

2014-2018 American Community Survey (ACS) estimates, published by U.S. Census Bureau

APPENDIX B1-a***CWSRF LIST OF NEBRASKA COMMUNITIES, NRDs, SIDs, and COUNTIES***

All Nebraska communities and Sanitary Improvement Districts (SID) in this Appendix may have aging infrastructure or other wastewater issues that are not listed on the current Funding or Planning lists, but may still need investigation, maintenance, and/or replacement. Being included in this IUP and on this list does not mean the community or SID will need, seek out, or receive funding from the CWSRF, but it does recognize the community's or SID's possible future needs which may be undocumented at this time. These communities and SIDs have been given zero (0) points, while still recognizing there is likely a potential need in the thousands of dollars in each community:

APPENDIX C

CWSRF & DWSRF INTEREST RATE AND ADMINISTRATIVE FEES SYSTEM

The Interest Rate System is developed in accordance with “Title 131 Rules and Regulations for the Wastewater Treatment Facilities and Drinking Water Construction Assistance Programs.” This system is reviewed and approved by the Environmental Quality Council (EQC) as a part of the public participation process followed each year for the Intended Use Plan.

On loans made from the proceeds of leveraged bonds, the Department will set interest rates reflective of the rates charged on the leveraged bonds. The Department of Environment and Energy will set the SRF market rates, using the cost of borrowing money for the CWSRF and DWSRF, recent local tax-exempt municipal issues, and costs for private borrowers as guidance.

CWSRF Interest Rate for Loans

The following interest rates will be set for CWSRF loans:

- For loans with terms of 20 years or less, the market rate will be set at 1.5%;
- For loans exceeding 20 years:
 - For borrowers with a moderate or high AWIN risk score, or are considered to be under financial hardship by the Department, the market rate will be set at 1.5%;
 - For borrowers with a low AWIN risk score, the market rate will be set at 2.0%*.
 - Eligible borrowers who do not meet the AWIN eligibility criteria may submit a financial hardship report to the Department for additional consideration.
- The market rate for Planning Loans will be set at 0%;
- Project which incorporate eligible Green Project Reserve (GPR) components may receive a deduction of up to 0.50% annual interest rate depending upon the percentage of project that is GPR eligible.
 - The market rate for a CWSRF project with qualifying GPR components will be initial market rate with a possible maximum reduction of 0.50% based upon the percentage of total SRF fundable GPR eligible components against entire SRF fundable amount. Projects that are 100% GPR eligible will receive a total reduction of market rate of 0.50%. If a CWSRF funded project has a combination of GPR eligible items and ineligible items, a blended rate will be calculated based upon the percentage of each portion.

DWSRF Interest Rate

The DWSRF market rates will be set at:

- For loans with terms of 20 years or less, the market rate will be set at 1.5%;
- For loans with terms exceeding 20 years:
 - For Disadvantaged Communities, the market rate will be set at 1.5%;
 - For all other communities, the market rate will be set at 2.0%;
- For Planning Loan, the market rate will be set at 0%.

For the purpose of this appendix, DW disadvantaged communities are communities which have a Median Household Income (MHI) less than or equal to 120% of the State MHI.

Private borrowers (except for not-for-profit community systems) will not qualify for any alternate rates or any rates available to communities as a result of a disadvantaged community determination. There are no discounts available for accelerated pay back or debt service based rates and no provisions for extended terms.

Interest Rate on Loans Made for Emergency Bridge Financing

For both CWSRF and DWSRF loans made for emergency projects, as defined by Title 131, that serve as a bridge financing while a borrower awaits to receive funding from other sources, such as FEMA, will have an annual interest rate of 0% for SFY 2022 IUP. The 0% will only apply to the portion that will be covered by other funding sources. Loan contracts for CWSRF will also establish that if other funding sources cannot be secured, the interest may be adjusted up to 1.5%.

Interest Rate on Loans During Construction

The Department may establish an interest rate to be applied during the construction period of a loan project up to the maximum market rate applicable to the borrower. If loan repayment would begin prior to finalization of construction, the interest rate on all outstanding principal will be adjusted to the principal market rate as determined by the loan agreement.

Adjusting the Interest Rate

The Department may review the bond market at the end of each quarter and adjust the SRF market interest rates if deemed necessary. Loans for projects addressing wastewater system or public water supply system needs will be made at the SRF market rate of interest; unless they qualify for the minimum rate, prorated rate, or another rate under the Alternate Rate Procedures.

Median Household Income Determination

For the CWSRF and DWSRF, Median Household Income (MHI) will be determined from the American Community survey (ACS) five-year estimates published by the U.S. Census Bureau. The MHI ACS 5-year data from 2012-2016 data is being updated to the ACS 5-year data from 2014-2018. The State MHI that is determined by ACS (2014-2019), has increased from \$54,384 to \$59,116.

The MHI for Sanitary and Improvement District (SID) projects will be based on the smallest county subdivision with a reported MHI, such as a precinct or census tract that encompasses the project service area. The MHI for Natural Resources Districts (NRDs) or Rural Water System projects will be based on the averages of the MHI values reported for the counties included all or partly in the district or system.

If there is a reason to believe that the census data is not an accurate representation of the median household income within the area to be served, the reasons will be documented and the loan applicant may furnish additional information regarding such median household income. Such information will consist of reliable data from local, regional, state, or federal sources or from a survey conducted by a reliable impartial source. This survey will be valid for five years.

Administrative Fees

The Department may apply an administrative fee against outstanding principal on loans to meet the long term administrative costs of the SRF programs. An annual fee of up to 0.5% in fees may be charged against the outstanding principal on Planning Loans and an annual fee of up to 1% may be charged against the outstanding principal on all other loans.

A reduction of up to 0.25% in fees may be applied on new loans with applicants who have previously borrowed and have fully repaid SRF loans. A reduction of up to 0.5% in fees may be applied on new loans with borrowers that have current outstanding SRF loan balances. If a project is atypical, or borrowers with current outstanding SRF loan balances are delinquent in repayment, the Director may choose to not allow a reduced administration fee. The reduction of administrative fees is only eligible for new loans for construction and is not applicable to refinancing of existing loans.

An annual administrative fee of 0% may be applied to loans made for emergency projects as defined by Title 131, that serve as bridge financing while a borrower awaits to receive funding from other sources, such as FEMA. Loan contracts for CWSRF will also establish that if other funding sources cannot be secured, the administrative fee may be adjusted up to 1.0% annually.

These fees are not included in the loan principal. Fees will be assessed on a semi-annual basis and billed at the same time invoices for principal and interest are mailed. The Director may waive this fee during construction, except on projects that only receive interim financing during construction. Fees collected in addition to principal and interest, which are not deposited as loan repayments, are considered "income received by the grantee" or "program income."

APPENDIX D

ASSESSING WASTEWATER INFRASTRUCTURE (AWIN)

The NDEE developed the **Assessing Wastewater Infrastructure Needs (AWIN)** program to assist struggling communities in Nebraska to better afford, maintain, and operate wastewater infrastructure projects. The goal of AWIN is to use current information to provide accurate estimates of future conditions in Nebraska communities. This information can be used to develop sustainable projects and minimize financial burdens for struggling communities, while working toward compliance for all communities.

AWIN examines various factors affecting communities, such as population change, per capita income, average age of residents and infrastructure needs, to develop a “sustainability risk” analysis. The focus of AWIN is to assist communities in evaluating their infrastructure needs to determine if affordable alternatives are available. AWIN will also be utilized in the prioritization of loans and grants through the Clean Water State Revolving Fund Intended Use Plan. The AWIN Ranking corresponds with the Sustainability Risk. The higher the AWIN score, the higher sustainability risk a community is predicted to have over the next ten to twenty years.

APPENDIX E

CWSRF SMALL TOWN GRANT ALLOCATION DETERMINATION PROCEDURES

Communities that are in the IUP with a population of 10,000 or fewer will be evaluated for eligibility for receipt of a Small Town Grant. This is in accordance with §81-15,153(11) Nebraska Revised Statute 1943. For the FFY 2022 IUP, the Department will limit the maximum amount of a Small Town Grant to \$250,000. All grant allocation payments are dependent on availability of appropriated funds.

The CWSRF Median Household Income (MHI) will be determined from the American Community Survey (ACS) five-year estimates published by the U.S. Census Bureau (<http://www.census.gov/acs/www/>). The State MHI reported in the 2014 – 2018 ACS five-year estimates is \$59,116. Population is based on the 2010 United States decennial census.

To ensure that grants will be awarded to communities with severe financial hardship, only those communities with a MHI below the 2014 – 2018 State MHI will be considered, and only if: (a) The estimated debt service payment for the entire eligible project exceeds \$10 per household per month based on an assumed CWSRF loan for the total project cost, less the potential Small Town Grant, other grants, and local funding for the project; and (b) The estimated domestic user's share of the loan payment would be reduced at least \$1 per month per household with the Small Town Grant. The calculations will be based up to a 30-year loan term. A partial Small Town Grant (i.e. less than the potential grant amount based on MHI and project cost) to the nearest \$1,000, may be awarded if a reduced grant can meet the above criteria.

The 2014 – 2018 MHI for Sanitary and Improvement District (SID) projects will be based on the smallest county subdivision with a reported MHI, such as a precinct or census tract, that encompasses the project service area. The MHI for Natural Resources Districts (NRDs) or Rural Water System projects will be based on the averages of the MHI values reported for the counties included, all or in part, in the district or system.

Small Town Grants are prioritized based on: 1) project benefit as described in Appendix A1; 2) estimated debt service per capita as a percentage of MHI; and 3) the estimated reduction in debt service that could be provided by the matching grant for which they are eligible.

Small Town Grants are reserved for the highest priority state ranked projects on the Funding List in priority order to the extent funds are available, until the bypass date. If the funding list does not have qualifying projects then the highest ranked qualifying project from the planning list that is ready to proceed may be moved to the funding list, dependent on availability of additional loan funds.

In determining the maximum percent for the Small Town Grants to communities with populations of 10,000 or fewer, the Department will use a procedure similar to one developed for determining the prorated interest rate based on a community's MHI as an indication of financial hardship.

For each community falling between 80 and 120 percent of the 2014 – 2018 State MHI, the matching grant level will be set between 50% and 0% by interpolation. Communities with an MHI of 80% or less of the State MHI will qualify for 50% matching grants.

The ratio of the difference between the community's MHI and 80% of the State MHI, to the difference between 80% of the State MHI and 120% of the State MHI is applied to 50%, with the result subtracted from 50%, resulting in the maximum percent for the State matching grant. Total of SRF grants concurrent with loans cannot exceed one-half of the eligible project cost in grant.

FIGURE E1

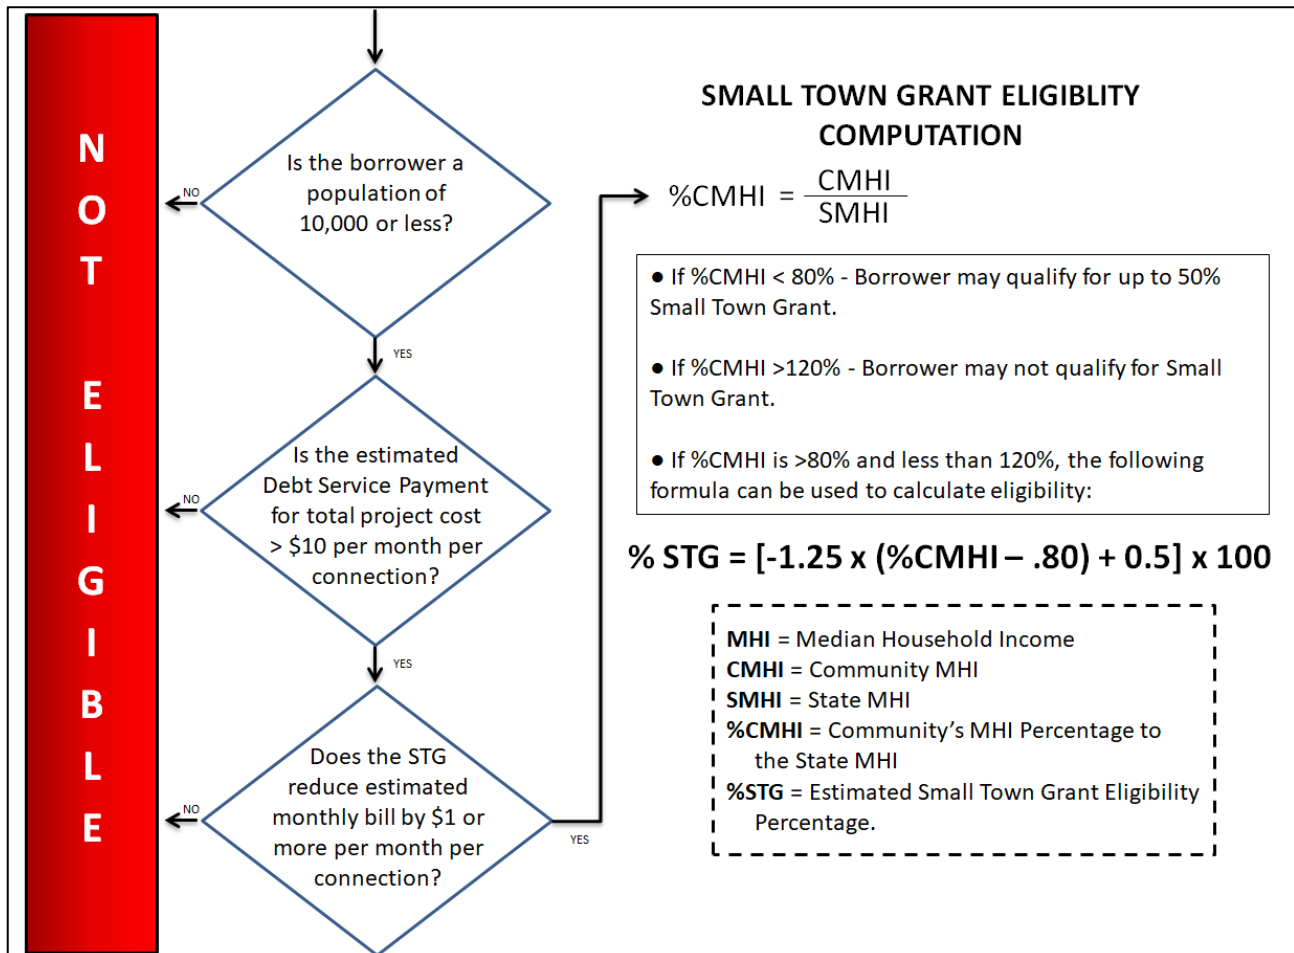

FIGURE E2

APPENDIX F

CWSRF and DWSRF FORGIVENESS ALLOCATION DETERMINATION PROCEDURES

All forgiveness awards are dependent on availability of funds. Additional subsidization provided by the FFY 2021 Clean Water State Revolving Fund (CWSRF) and Drinking Water State Revolving Fund (DWSRF) Capitalization Grants will be distributed to eligible loan recipients through this process.

The CWSRF and DWSRF Median Household Income (MHI) will be determined from the American Community Survey (ACS) five-year estimates published by the U.S. Census Bureau (<http://www.census.gov/acs/www/>). The State MHI as reported in the 2014 – 2018 ACS five-year estimates is \$59,116. Population is based on the 2010 United States decennial census. If there is a reason to believe that the census data is not an accurate representation of the MHI within the area to be served, the reasons will be documented and the loan applicant may furnish additional information regarding such MHI. Such information will consist of reliable data from local, regional, state, or federal sources or from a survey conducted by a reliable impartial source. This new MHI will be valid for five years.

The respective MHI for Sanitary and Improvement District (SID) projects will be based on the smallest county subdivision with a reported MHI, such as a precinct or census tract, that encompasses the project service area. The MHI for Natural Resources Districts (NRDs) or Rural Water System projects will be based on the averages of the MHI values reported for the counties included, all or in part, in the district or system.

CWSRF

The June 2014 CW amendments required States to develop affordability criteria to assist in identifying applicants that would have difficulty financing projects without additional subsidization. The criteria must be based on income, unemployment data, population trends and other data determined relevant by the State.

In 2012, the Department started developing the Assessing Wastewater Infrastructure Needs (AWIN) program to assist struggling communities in Nebraska to better afford, maintain, and operate wastewater infrastructure projects. The goal of AWIN is to use current information to provide accurate estimates of future conditions in Nebraska communities to develop sustainable projects and minimize financial burdens for struggling communities. AWIN examines various factors affecting communities, such as population trends, population, median household income, unemployment, average age of residents, and infrastructure needs to develop a “sustainability risk” analysis. The AWIN sustainability risk was divided into three categories: low risk, moderate risk, and high risk. Applicants with a high sustainability risk are thought to potentially need the most assistance to bring them into compliance and keep them in compliance in the future with as little additional stress as possible. The Department will utilize the AWIN program as a portion of determining which applicants will be eligible for loan forgiveness.

Starting SFY 2022, the CWSRF will implement two categories of loan forgiveness eligibility.

Category 1:

For each CWSRF loan recipient falling between 80 and 120% of the State MHI for the service area, the maximum Forgiveness level will be set between 50% and 0% by interpolation. Loan recipients with a MHI of 80% or less of the State MHI for the service area will qualify for 50% maximum Forgiveness. For those above 80% but less than 120% of the state MHI, the ratio of the difference between the loan recipient’s MHI and 80% of the State MHI to the difference between 80% of the State MHI and 100% of the State MHI is applied to 50%, with the result subtracted from 50%, resulting in the maximum percent for the Forgiveness. Forgiveness and Small Town Grant together cannot exceed the maximum percentage of project cost shown in Figure F1.

Figure F1 - CWSRF Forgiveness

This CWSRF subsidization is only available for municipalities that have populations equal to or fewer than 10,000 people, up to a ceiling of \$150,000 per project, dependent on availability of funding from federal capitalization grants and the total amount of funds the Department decides to allocate for forgiveness. Municipalities must also have a high or moderate AWIN sustainability risk factor as identified on NDEE's website. Municipalities who don't meet the AWIN eligibility criteria may submit a financial hardship report to the Department for additional consideration justifying the forgiveness requested.

Category 2

For each CWSRF loan recipient falling between 80 and 120% of the State MHI for the service area, the maximum Forgiveness level will be set using the same ratio as determined by Figure F1 and with a maximum cap set between 25% and 0% by interpolation based on population.

- For populations of 10,000 or less, a cap of 15% loan forgiveness on eligible project cost will be imposed.
- For populations of 3,300 or less, a cap of 20% loan forgiveness on eligible project cost will be imposed.
- For populations of 500 or less, a cap of 25% loan forgiveness on eligible project cost will be imposed.

Municipalities must also have a high or moderate AWIN sustainability risk factor as identified on NDEE's website. Municipalities who don't meet the AWIN eligibility criteria may submit a financial hardship report to the Department for additional consideration justifying the forgiveness requested.

Borrower's will be assessed under both categories and will be awarded the greater of the two

Total of SRF grants concurrent with loans cannot exceed one-half of the eligible project cost in grant. At the time of the loan closing, all current Intended Use Plan conditions are in effect and past IUP conditions are not available to the loan recipient.

DWSRF

Public water supply systems (PWSs) that are in the DWSRF IUP and receive a SRF loan will be evaluated for eligibility for receipt of Forgiveness. This is in accordance with §71-5321(3) Nebraska Revised Statutes.

A graphical representation of the Forgiveness allocation determination procedure is shown in Figure F2 for DWSRF. A simplification as to how forgiveness assistance is offered is planned, in that the factor of population will be carried throughout the funding of priorities this year. Still capped per the long established MHI disadvantaged criteria, but now per the following tiered system:

Public Health Projects

- i. Population of 10,000 or less – Capped at 20%
- ii. Population of 3,300 or less – Capped at 25%
- iii. Population of 500 or less – Capped at 30%

Low Priority Projects ranked with a Sustainability Factor, or greater

- 1) Population of 10,000 or less – Capped at 15%
- 2) Population of 3,300 or less – Capped at 20%
- 3) Population of 500 or less – Capped at 25%

These will be the maximum forgiveness benefits available to qualifying disadvantaged communities that meet the affordability criteria presented above and have populations equal to or less than 10,000 people, with two exceptions described below. Lastly, private borrowers will not qualify for loan forgiveness, nor is forgiveness available for Planning Loans.

1. A 50% forgiveness ceiling with a \$250,000 cap may be available to a PWS, at the discretion of the NDEE, under all of the following conditions:
 - The PWS has closed a loan with the SRF within the past 5 years;
 - That loan was for a project needed to resolve either an Enforcement Action or an Administrative Order (A.O.) issued to the PWS; and,
 - That project did not resolve the specified Enforcement Action or A.O., or resulted in a separate Enforcement Action or A.O., through no fault by the PWS.

Under these circumstances, the PWS may receive up to \$250,000 in forgiveness at a 50% allocation, at the discretion of the NDEE, as part of a loan amendment or a second loan to comply with the PWS' Enforcement Action or A.O. The amount of the forgiveness must not exceed the amount of the loan obtained through the DWSRF for the initial project. Further, either the eligible amount of the Forgiveness will be offset by, or the PWS shall repay the Forgiveness amount to the SRF, to the extent another grant, insurance settlement, or any other non-loan funds are received by the PWS for the same need.

2. Further, forgiveness funding as a part of a sponsorship program may be offered to all DWSRF funded projects that include a new water supply well(s) phase, or rely on innovative planning to avoid an after treatment alternative. If a community is pursuing a treatment alternative with DWSRF funding, they may submit a plan prepared by a professional engineer based upon innovative techniques that could help the community avoid implementing the treatment alternative as a means of returning to compliance. The plan may be eligible for reimbursement through forgiveness funding up to an overall 50% level should it be determined the plan is acceptable to NDEE.

Figure F2 - DWSRF Forgiveness

APPENDIX G **COMMON PRE-APPLICATION PROCEDURE**

INTRODUCTION: In 1995 the state and federal funding agencies that are members of the Water Wastewater Advisory Committee (WWAC) adopted a common Preliminary Engineering Report (PER) and pre-application format that they would all use to reduce the costs to applicants in developing a project. Those agencies are: Nebraska Department of Environment and Energy and the USDA Rural Development (Water and Environmental Programs). This successful process has been modified over the years as conditions changed. The Agencies undertook an integral process improvement endeavor that included responding to the voice of the communities and consulting engineers of Nebraska. WWAC shall collaborate to bring more capital to rural communities by providing a process for community decision making for funding and completion of projects that consistently maximizes the funding resources to the most communities possible. Communities may submit their projects directly to the agencies if they do not want to utilize WWAC's resources.

PROCEDURE: Each pre-application will be reviewed by WWAC as follows:

1. Submit one (1) electronic original of the pre-application and Facility Plan (FP)/ PER to ndee.WWAC@nebraska.gov. The pre-application and guide for writing a PER is found below. Though not recommended, a paper copy can be submitted to:
Nebraska Department of Environment and Energy
Attn: State Revolving Fund (SRF) Section
Post Office Box 98922
Lincoln, NE 68509-8922
2. Upon receipt, all WWAC members receive a copy of the pre-application and FP/PER. Incomplete pre-applications will not be considered until all information is received. Upon receipt a WWAC Point of Contact will be assigned and contact you. Please direct any questions to your Point of Contact.
3. Subsequently, the technical subcommittee of WWAC will review the pre-application for the engineering scope within 30 days after the submission. WWAC may request the applicant/consulting engineer attend a meeting (or the applicant may request a meeting) with WWAC to discuss the project scope, including technical aspects and alternatives considered. This meeting can be held in person, by video conference, or by teleconference and should include appropriate program staff, applicant representative and the project engineer. Meetings will be held on the fourth Tuesday of each month in the City of Lincoln. Once the technical subcommittee has determined the scope as 95% complete, the project will be forwarded to the financing subcommittee. Applications will be expedited through the technical committee if the following actions have been taken:

- Test hole or equivalent confirming water quality for development of a well field.
 - The applicant provides evidence that they have secured the necessary land for the project. Assurances such as deeds, purchase agreements, leases, or a resolution by the Board of Trustees on their intent to proceed with condemnation for land necessary for the project.
 - Service meters are adequate to provide billing commensurate with consumption. This is either evidence that the existing meters have useful life or new service meters with the project.
 - All feasible alternatives were considered.
 - Accuracy of the number of users is critical. Evidence of the number of users must be attached (See Appendix A). Any new, seasonal, or inactive users should be identified.
 - In towns under population of 400: AWIN score is reported. If the score is high, discussion on the actual impact to the environment and public health should be described. In those cases, regulatory measures may be considered if affordability becomes restrictive.
4. The financing subcommittee meetings will be held on the third Tuesday of the month. After review, a funding option packet will be sent to the applicant containing the basic information used to determine the funding options. Instructions to respond will be provided in the funding options packet.
 5. The applicant will have 60 days to respond to the funding option packet. If the Point of Contact has not heard from the applicant after 60 days, WWAC will contact the applicant and discuss the status of the project.
 6. After a funding option has been selected, the selected funding agency(ies) will contact the applicant with further instructions.
 7. Each funding agency will follow its own full application process. Applicants seeking funding for the same project from multiple agencies must submit a full application to the particular agencies.
 8. If a full application varies significantly from the pre-application, or if the facts involving a project have changed such that the feasibility of the proposed solution warrants further investigation, any individual WWAC agency may request the full WWAC to review the project again.

14. TOTAL PROJECT COSTS (line 12 minus 13)	

The undersigned representative of the applicant certifies that the information contained herein and the attached statements, exhibits, and reports, are true, correct and complete to the best of my knowledge and belief.

Applicant Signature: _____ Date: _____

Pre-application Preparer Signature: _____ Date: _____

Pre-application is for SRF only Yes No

NAME OF APPLICANT _____

The purpose of this Appendix is to determine the financial feasibility and sustainability of the existing or proposed system for which funding is being requested.

Is this a _____ **Water** or _____ **Wastewater Project**?

Does the Applicant currently use meters? YES NO

Does the Applicant have a computer to read meters and bill customers? YES NO

If not, would you like to add this into the project? YES NO.

I certify under penalty of law, based on information and belief formed after reasonable inquiry, the statements and information contained in these documents are true, accurate and complete.

Date

City/Village Clerk

Please attach a copy of the current water or wastewater rates.

Please attach the last twelve tables from the billing software showing address, meter ID and water usage for each hookup over the last 12 months. OR breakout the users and their meters below.

Note: If the facility does NOT currently have water meters, please obtain your engineers assistance to estimate the size of meter needed.

Note for Wastewater projects: Do not report those users who have their own septic system and are not on the City sewer.

Note for Water projects: Count all existing and proposed services.

EXISTING RESIDENTIAL USERS

Meter Size	Number of Hookups
3/4" and under	
1" and 7/8"	
1-1/4"	

EXISTING TOTAL USERS

Meter Size	Number of Hookups
3/4" and under	
1" and 7/8"	
1-1/4"	

PLEASE CONTINUE ON PAGE 2

"This institution is an Equal Opportunity Provider and Employer."

Appendix A – Water/ Sewer User Details

PROJECTED RESIDENTIAL HOOKUPS If this project adds users.

Meter Size	Projected Hookups

1-1/4"	

For Wastewater projects: Total sewer flow over last twelve months _____ (gal).

For water projects: Total water pumped over last twelve months _____ (gallons)

For water projects: Total water sold to residential users over last twelve months _____ (gallons)

FACILITY PLAN OR PRELIMINARY ENGINEERING REPORT GUIDE
FOR WASTEWATER OR DRINKING WATER FACILITIES
GENERAL OUTLINE OF A FACILITY PLAN OR PRELIMINARY ENGINEERING REPORT

WWAC applicants considering use of the Clean Water State Revolving Fund (wastewater treatment works projects) should include in their engineering report a certification using the following language:

The engineer on behalf of the applicant

- (A) has studied and evaluated the cost and effectiveness of the processes, materials, techniques, and technologies for carrying out the proposed project or activity for which assistance is sought under this title; and*
- (B) has selected, to the maximum extent practicable, a project or activity that maximizes the potential for efficient water use, reuse, recapture, and conservation, and energy conservation, considering—*
- (i) the cost of constructing the project or activity;*
 - (ii) the cost of operating and maintaining the project or activity over the life of the project or activity; and*
 - (iii) the cost of replacing the project or activity;*

1) PROJECT PLANNING

- a) Location
- b) Environmental Resources Present
- c) Population Trends
- d) Community Engagement

2) EXISTING FACILITIES

- a) Location Map
- b) History
- c) Condition of Existing Facilities
- d) Financial Status of any Existing Facilities
- e) Water/Energy/Waste Audits

3) NEED FOR PROJECT

- a) Health, Sanitation, and Security
- b) Aging Infrastructure
- c) Reasonable Growth

4) ALTERNATIVES CONSIDERED

- a) Description
- b) Design Criteria
- c) Map
- d) Environmental Impacts
- e) Land Requirements
- f) Potential Construction Problems
- g) Sustainability Considerations
 - i) Water and Energy Efficiency
 - ii) Green Infrastructure
 - iii) Other

DETAILED OUTLINE OF A PRELIMINARY ENGINEERING REPORT

1) PROJECT PLANNING

Describe the area under consideration. Service may be provided by a combination of central, cluster, and/or centrally managed individual facilities. The description should include information on the following:

- a) Location. Provide scale maps and photographs of the project planning area and any existing service areas. Include legal and natural boundaries and a topographical map of the service area.
- b) Environmental Resources Present. Provide maps, photographs, and/or a narrative description of environmental resources present in the project planning area that affect design of the project. Environmental review information that has already been developed to meet requirements of NEPA or a state equivalent review process can be used here.
- c) Population Trends. Provide U.S. Census or other population data (including references) for the service area for at least the past two decades if available. Population projections for the project planning area and concentrated growth areas should be provided for the project design period. Base projections on historical records with justification from recognized sources.
- d) Community Engagement. Describe the utility's approach (or proposed to use) to engage the community in the project planning process. The project planning process should help the community develop an understanding of the need for the project, the operational service levels required, funding and revenue strategies to meet these requirements.

2) EXISTING FACILITIES

Describe each part of the existing facility and include the following information:

- a) Location Map. Provide a map, photographs and a schematic process layout of all existing facilities. Identify facilities that are no longer in use or abandoned.
- b) History. Indicate when major system components were constructed, renovated, expanded, or removed from service. Discuss any component failures and the cause for the failure. Provide a history of any applicable violations of regulatory requirements.
- c) Condition of Existing Facilities. Describe present condition; suitability for continued use; adequacy of current facilities; and their conveyance, treatment, storage, and disposal capabilities. Describe the existing capacity of each component. Describe and reference compliance with applicable federal, state, and local laws. Include a brief analysis of overall current energy consumption. Reference an asset management plan if applicable.
- d) Financial Status of any Existing Facilities. Provide information regarding current rate schedules, annual O&M cost (with a breakout of current energy costs), other capital improvement programs, and tabulation of users by monthly usage categories for the most recent typical fiscal year. Report existing debts and required reserve accounts.
- e) Water/Energy/Waste Audits. If applicable to the project, discuss any water, energy, and/or waste audits which have been conducted and the main outcomes.

3) NEED FOR PROJECT

Describe the needs in the following order of priority:

- a) Health, Sanitation, and Security. Describe concerns and include relevant regulations and correspondence from/to federal and state regulatory agencies. Include copies of such correspondence as an attachment to the Report.
- b) Aging Infrastructure. Describe the concerns and indicate those with the greatest impact. Describe water loss, inflow and infiltration, treatment or storage needs, management adequacy, inefficient designs, and other problems. Describe any safety concerns.
- c) Reasonable Growth. Describe the reasonable growth capacity that is necessary to meet needs during the planning period. Facilities proposed to be constructed to meet future growth needs should generally be supported by additional revenues. Consideration should be given to designing for phased capacity increases. Provide number of new customers committed to this project.

4) ALTERNATIVES CONSIDERED

This section should contain a description of the alternatives that were considered in planning a solution to meet the identified needs. Documentation of alternatives considered is often a Report weakness. Alternative approaches to ownership and management, system design (including resource efficient or green alternatives), and sharing of services, including various forms of partnerships, should be considered. In addition, the following alternatives should be considered, if practicable: building new centralized facilities, optimizing the current facilities (no construction), developing centrally managed decentralized systems, including small cluster or individual systems, and developing an optimum combination of centralized and decentralized systems. Alternatives should be consistent with those considered in the NEPA, or state equivalent, environmental review. Technically infeasible alternatives that were considered should be mentioned briefly along with an explanation of why they are infeasible, but do not require full analysis. For each technically feasible alternative, the description should include:

- a) Description. Describe the facilities associated with every technically feasible alternative. Describe source, conveyance, treatment, storage and distribution facilities for each alternative. Basic hydraulic calculations shall be listed in tabular form. A feasible system may include a combo of centralized/ decentralized (on-site/ cluster) facilities.
- b) Design Criteria. State the design parameters used for evaluation purposes. These parameters should comply with federal, state, and agency design policies and regulatory requirements.
- c) Map. Provide a schematic layout map to scale and a process diagram if applicable. If applicable, include future expansion of the facility.
- d) Environmental Impacts. Provide information about how the specific alternative may impact the environment. Describe only those unique direct and indirect impacts on floodplains, wetlands, other important land resources, endangered species, historical and archaeological properties, etc., as they relate to each specific alternative evaluated. Include generation and management of residuals and wastes.
- e) Land Requirements. Identify sites and easements required. Further specify whether these properties are currently owned, to be acquired, leased, or easements.

Appendix A – Water/ Sewer User Details

- f) **Potential Construction Problems.** Discuss concerns such as subsurface rock, high water table, limited access, existing resource or site impairment, or other conditions which may affect cost of construction or operation of facility.
- g) **Sustainability Considerations.** Sustainable utility management practices include environmental, social, and economic benefits that aid in creating a resilient utility.
 - i) **Water and Energy Efficiency.** Discuss water reuse, water efficiency, water conservation, energy efficient design (i.e. reduction in electrical demand), and/or renewable generation of energy, and/or minimization of carbon footprint, if applicable to the alternative. Alternatively, discuss the water and energy usage for this option as compared to other alternatives.
 - ii) **Green Infrastructure.** If applicable, discuss aspects of project that preserve or mimic natural processes to manage stormwater. Address management of runoff volume and peak flows through infiltration, evapotranspiration, and/or harvest and use.
 - iii) **Other.** Discuss any other aspects of sustainability (such as resiliency or operational simplicity) that are incorporated into the alternative, if applicable.
- h) **Cost Estimates.** Provide cost estimates for each alternative, including a breakdown of the following costs associated with the project: construction, non- construction and annual O&M costs. A construction contingency should be included as a non-construction cost. Cost estimates should be included with the descriptions of each technically feasible alternative. O&M costs should include a rough breakdown by O&M category (see example below) and not just a value for each alternative. Information from other sources, such as the recipient’s accountant or other known technical service providers, can be incorporated to assist in the development of this section. The cost derived will be used in the life cycle cost analysis described in Section 5 a.

Example O&M Cost Estimate	
Personnel (i.e. Salary, Benefits, Payroll Tax, Insurance, Training)	
Administrative Costs (e.g. office supplies, printing, etc.)	
Water Purchase or Waste Treatment Costs	
Insurance	
Energy Cost (Fuel and/or Electrical)	
Process Chemical	
Monitoring & Testing	
Short Lived Asset Maintenance/Replacement*	
Professional Services	
Residuals Disposal	
Miscellaneous	
Total	

* See Table A for example list

5) SELECTION OF AN ALTERNATIVE

Selection of an alternative is the process by which data from the previous section, “Alternatives Considered” is analyzed in a systematic manner to identify a recommended alternative. The analysis should include consideration of both life cycle costs and non- monetary factors such as reliability, ease of use, and appropriate wastewater or water treatment technology for the Applicant’s management capability shall be

Appendix A – Water/ Sewer User Details

conducted. (I.e. triple bottom line analysis: financial, social, and environmental). If water reuse or conservation, energy efficient design, and/or renewable generation of energy components are included in the proposal provide an explanation of their cost effectiveness in this section.

- a) Life Cycle Cost Analysis. A life cycle present worth cost analysis (an engineering economics technique to evaluate present and future costs for comparison of alternatives) should be completed to compare the technically feasible alternatives. Do not leave out alternatives because of anticipated costs; let the life cycle cost analysis show whether an alternative may have an acceptable cost. This analysis should meet the following requirements and should be repeated for each technically feasible alternative. Several analyses may be required if the project has different aspects, such as one analysis for different types of collection systems and another for different types of treatment.
 - i) The analysis should convert all costs to present day dollars;
 - ii) The planning period to be used is recommended to be 20 years, but may be any period determined reasonable by the engineer and concurred on by the state or federal agency;
 - iii) The discount rate to be used should be the “real” discount rate taken from Appendix C of OMB circular A-94 and found at www.whitehouse.gov/Appendix-C.pdf (0.30% in 2020).
 - iv) The total capital cost (construction plus non-construction costs) should be included;
 - v) Annual O&M costs should be converted to present day dollars using a uniform series present worth (USPW) calculation;
 - vi) The salvage value (S) of the constructed project should be estimated using the anticipated life expectancy of the constructed items using straight line depreciation calculated at the end of the planning period and converted to present day dollars, i.e. remaining depreciation;
 - vii) The present worth of the salvage value is subtracted from the net present worth ;
 - viii) The net present value (NPV) is then calculated for each technically feasible alternative as the sum of the capital cost (C) plus the present worth of the uniform series of annual O&M (USPW (O&M)) costs minus the single payment present worth of the salvage value (SPPW(S)):
$$NPV = C + USPW (O\&M) - SPPW(S)$$
 - ix) A table showing the capital cost, annual O&M cost, salvage value, present worth of each of these values, and the NPV should be developed for state or federal agency review. All factors (major and minor components), discount rates, and planning periods used should be shown within the table;
 - x) Short lived asset costs (See Table A for examples) should also be included in the life cycle cost analysis if determined appropriate by the consulting engineer or agency. Life cycles of short-lived assets should be tailored to the facilities being constructed and be based on generally accepted design life. Different features in the system may have varied life cycles.
- b) Non-Monetary Factors. Non-monetary factors, including social and environmental aspects (E.g. sustainability considerations, operator training requirements, permit issues, community objections, reduction of greenhouse gas emissions, wetland relocation) should also be considered in determining which alternative is recommended and may be factored into the calculations.

Appendix A – Water/ Sewer User Details

- c) Wastewater Projects. If population is decreasing, the engineer preparing the PER/FP should contact NDEE for options that can be applied to the project. For these towns, an option must be included as an alternative in the PER/FP.

6) PROPOSED PROJECT (RECOMMENDED ALTERNATIVE)

The engineer should include a recommendation for which alternative(s) should be implemented. This section should contain a fully developed description of the proposed project based on the preliminary description under the evaluation of alternatives. Include a schematic for any treatment processes, a layout of the system, and a location map of the proposed facilities. At least the following information should be included as applicable to the specific project:

- a) Preliminary Project Design.

- i) Drinking Water:

Water Supply. Include requirements for quality and quantity. Describe recommended source, including site and allocation allowed. Details should be provided for determining average daily demand (residential, commercial & leakage). The applicant's average gallons per capita per day (3 years data preferred) may be used OR the use of other published engineering design guidelines may be submitted for consideration in designing the proposed project. Peak period demands for daily and hourly should reflect the same conditions as described above.

Treatment. Describe process in detail (including whether adding, replacing, or rehabilitating a process) and identify location of plant and site of any process discharges. Identify capacity of treatment plant (i.e. Maximum Daily Demand). Identify any wastewater generation and treatment method. If discharged to sanitary sewer, evaluate collection system and wastewater treatment capability.

Storage. Identify size, type and location. Storage facilities should be sized using the Recommended Standards for Water Works guidelines (except for fire flows as stated above) OR the use of other published engineering design guidelines may be submitted for consideration in designing the proposed project.

Pumping Stations. Identify size, type, location and any special power requirements. For rehabilitation projects, include description of components upgraded.

Distribution Layout. Identify general location of new pipe, replacement, or rehabilitation: lengths, sizes and key components.

CDBG. Monies are to be expended for human consumption and/or for health-related issues. Upsizing wells, storage, and distribution to mainly meet fire flows or primarily serve residential & industrial future growth or agricultural irrigation & livestock purposes will not be considered as eligible under the program rules and those uses must be separated from the project and funded through other lenders.

Development of a new well field site. The following information will be provided:

- 1) Site approval by the NDEE and
- 2) Data which supports the development of the well in this area such as geological surveys, water quality and production data (gallons per minute, specific capacity, etc.) on wells in adjoining areas, data from the Dept. of Natural Resources or Natural Resource District, or water quality and production results from a test hole(s).

Appendix A – Water/ Sewer User Details

ii) Wastewater/Reuse:

Collection System/Reclaimed Water System Layout. Identify general location of new pipe, replacement or rehabilitation: lengths, sizes, and key components. Flows in excess of 120 gpcd indicating infiltration or 275 gpcd during a storm event should require the completion of a Sanitary Sewer Evaluation Survey. This study analyzes which is more cost effective; to transport and treat the excess I&I, or if sewer rehabilitation would be cost effective in removing the excess I&I. Winter quarter potable water usage should be analyzed and compared to the wastewater flow data to check if exfiltration is occurring in the collection system. Unsewered areas within the planning jurisdiction should be identified. A cost-effectiveness analysis should be conducted on eliminating existing septic tank systems with sewer extensions.

Pumping Stations. Identify size, type, site location, and any special power requirements. For rehabilitation projects, include description of components upgraded.

Storage. Identify size, type, location and frequency of operation.

Treatment. Describe process in detail (including whether adding, replacing, or rehabilitating a process) and identify location of any treatment units and site of any discharges (end use for reclaimed water). Identify capacity of treatment plant (i.e. Average Daily Flow). Details should be provided for determining the average daily, peak hour and maximum daily wastewater flows to the POTW. Actual flow monitoring data should be gathered over a sufficient period to capture a wet weather event to analyze for infiltration and inflow from the sewer system. If commercial or industrial contributions are received by the POTW then flow proportioned composite sampling should be conducted measuring the daily pounds of Ammonia, CBOD, and TSS and their peak monthly values.

Receiving stream. Information along with the current or proposed NPDES discharge permit limitations determined and disinfection and any industrial pretreatment considerations analyzed.

Evaluation of the treatment alternatives should include conventional as well as any alternative or innovative technology including regionalization and sludge disposal alternatives for the 20-year design average and peak wastewater flows. Design criteria shall follow the current design standards as required by NDEE. A cost effectiveness monetary analysis will be required on the principal alternatives as outlined in paragraph C above, along with an engineering evaluation of the following factors: a) reliability, b) energy use, c) revenue generating alternatives, d) process complexity, e) O&M considerations, and f) environmental impacts.

SRF. Monies are directed for municipally owned wastewater facility needs. Projects of a speculative nature or primarily for industrial capacity are not normally funded.

iii) Solid Waste:

Collection. Describe process in detail and identify quantities of material (in both volume and weight), length of transport, location and type of transfer facilities, and any special handling requirements.

Storage. If any, describe capacity, type, and site location.

Processing. If any, describe capacity, type, and site location.

Appendix A – Water/ Sewer User Details

Disposal. Describe process in detail and identify permit requirements, quantities of material, recycling processes, location of plant, and site of any process discharges.

iv) Stormwater:

Collection System Layout. Identify general location of new pipe, replacement or rehabilitation: lengths, sizes, and key components.

Pumping Stations. Identify size, type, location, and any special power requirements.

Treatment. Describe treatment process in detail. Identify location of treatment facilities and process discharges. Address capacity of treatment process.

Storage. Identify size, type, location and frequency of operation.

Disposal. Describe type of disposal facilities and location.

Green Infrastructure. Provide the following for green infrastructure alternatives:

- (1) Control Measures Selected: Identify types of control measures selected (e.g., vegetated areas, planter boxes, permeable pavement, rainwater cisterns).
- (2) Layout: Identify placement of green infrastructure control measures, flow paths, and drainage area for each control measure.
- (3) Sizing: Identify surface area and water storage volume for each green infrastructure control measure. When applicable address soil infiltration rate, evapotranspiration rate, and use rate (for rainwater harvesting).
- (4) Overflow: Describe overflow structures and locations for conveyance of larger precipitation events.

b) Permit Requirements. Identify any construction, discharge and capacity permits that will/may be required as a result of the project.

c) Sustainability Considerations (if applicable).

- i) Water and Energy Efficiency. Describe aspects of the proposed project addressing water reuse, water efficiency, and water conservation, energy efficient design, and/or renewable generation of energy, if incorporated into the selected alternative.
- ii) Green Infrastructure. Describe aspects of project that preserve or mimic natural processes to manage stormwater, if applicable to the selected alternative. Address management of runoff volume and peak flows through infiltration, evapotranspiration, and/or harvest and use, if applicable.
- iii) Other. Describe other aspects of sustainability (such as resiliency or operational simplicity) that are incorporated into the selected alternative, if incorporated into the selected alternative.

d) Total Project Cost Estimate (Engineer's Opinion of Probable Cost). Provide an itemized estimate of the project cost based on the stated period of construction. Include construction, land and right-of-ways, legal, engineering, construction program management, funds administration, equipment, construction contingency, and other costs associated with the proposed project. The construction subtotal should be

Appendix A – Water/ Sewer User Details

separated out from the non-construction costs. The non-construction subtotal should be included and added to the construction subtotal to establish the total project cost. An appropriate construction contingency should be added as part of the non- construction subtotal. For projects containing both water and waste disposal systems, provide a separate cost estimate for each system. The engineer may rely on the owner for estimates of cost for items other than construction, equipment, and engineering.

- e) Annual Operating Budget. Provide itemized annual operating budget information. The owner has primary responsibility for the annual operating budget; however, there are other parties that may provide technical assistance. Provide a copy of the previous 3 years financial history on the operations of the water (or sewer) fund. Provide an amortization schedule on existing indebtedness held on the system. This information will be used to evaluate the financial capacity of the system. The engineer will incorporate information from the owner's accountant and other known technical service providers.
 - i) Income. Provide information about all sources of income for the system including a proposed rate schedule. Realistically project income for existing and proposed new users separately, based on existing user billings, water treatment contracts, and other sources of income. In the absence of historic data or other reliable information, for budget purposes, base water use/ sewage of 100 gallons per capita per day. Water use per residential connection may then be calculated based on the most recent U.S. Census or other data for the state or county of the average household size. When large agricultural or commercial users are projected, the Report should identify those users and include facts to substantiate such projections and evaluate the impact of such users on the economic viability of the project.
 - ii) Annual O&M Costs. Provide an itemized list by expense category and project costs realistically. Provide projected costs for operating the system as improved. In the absence of other reliable data, base on actual costs of other facilities of similar size and complexity. Include facts to substantiate O&M cost estimates. Include personnel costs (note operator upgrades needed), administrative costs, water purchase or treatment costs, accounting and auditing fees, legal fees, interest, utilities, energy costs, insurance, annual repairs and maintenance, monitoring and testing, supplies, chemicals, residuals disposal, office supplies, printing, professional services, and miscellaneous as applicable. Any income from renewable energy generation which is sold back to the electric utility should also be included, if applicable.
 - iii) Short-Lived Asset Reserve – A table of short-lived assets (Assets with design life of 15 years or less) should be included for the system (See Table A for examples). The table should include the asset, the expected year of replacement, the anticipated cost and a recommended annual reserve deposit to fund replacement. Short-lived assets include those items not covered under O&M.
 - iv) Debt Repayments. Describe existing and proposed financing with the estimated amount of annual debt repayments from all sources. All estimates of funding should be based on loans, not grants. All annual debt repayments should take into consideration reasonable population trends over the life of the loan.
 - v) Reserves. Describe the existing and proposed loan obligation reserve requirements.
- f) Land. Provide evidence of land rights being procured such as easements, purchase options or other evidence for well sites or lagoon sites. When land application sites are part of the project they shall be purchased or leased. The lease or easement executed as an interest in real property, filled and indexed as such in the appropriate office of the registrar of deeds. The lease or easement shall be for the life of the loan.

7) CONCLUSIONS AND RECOMMENDATIONS

Provide any additional findings and recommendations that should be considered in development of the project. This includes recommendation of special studies, highlighting the need for special coordination, a recommended plan of action to expedite project development, and any other necessary considerations.

A timetable with the following milestones shall be included:

- a) Securing land rights.
- b) Completion of test hole drilling and testing.
- c) Completion of environmental review process.
- d) Submission of loan/grant application(s) to appropriate agency(ies).
- e) Completion of final plans and specification.
- f) Start and completion of construction.

APPENDIX H

General Requirements for the Linked Deposit Program

Along with authority granted to the Department by Nebraska Revised State Statute 81-15,151.03, the following procedures will be incorporated into the Department's CWSRF Linked Deposit Program policies.

001 Eligible financial institutions. To become an eligible financial institution to participate in the Linked Deposit Program, financial institutions and the Director must sign a Linked Deposit Lender Agreement.

002 Linked Deposit Lender Agreement will include, but not be limited to, the following:

002.01 Conditions to ensure compliance with all federal, state, and local requirements.

002.02 Specific conditions, terms, and limits for eligible financial institutions and Linked Deposit Loan Contracts, as determined by the Department.

002.03 Interest rate applied to linked deposit account. The Department may apply an annual interest rate to funds deposited into the linked deposit account.

002.04 The procedure for eligible financial institutions to obtain Department approval of project eligibility for the Linked Deposit Program.

003 Eligible financial institutions' responsibilities shall include, but not be limited to:

003.01 Evaluating linked deposit loan borrowers' financial capability. Eligible financial institutions will have the authority to approve or deny a linked deposit borrower's loan application.

003.02 Establishing a Linked Deposit Loan Contract with the linked deposit borrower.

003.03 Collecting repayment from linked deposit borrowers and any additional terms and conditions set in the Linked Deposit Loan Contract.

003.04 Confirming availability of linked deposit funds as described in the Linked Deposit Lender Agreement.

003.05 Submitting to the Department required documentation in accordance with the Linked Deposit Lender Agreement.

003.06 All other responsibilities as stated in the Linked Deposit Lender Agreement.

004 Linked Deposit Loan Contracts must include the following:

004.01 The interest rate for the linked deposit loan will be fixed and must be at an interest rate lower than the eligible financial institution's interest rate for a similar project.

004.02 The length of term for the linked deposit loan.

004.03 Conditions allowing the Department, and any authorized representative of the Department, access to the project at all reasonable times for such purposes as inspection, monitoring, and oversight of building, operation, rehabilitation, and replacement activities.

004.04 Conditions as are necessary to ensure compliance with all federal, state, and local requirements.

004.05 Conditions stating linked deposit borrowers shall be responsible for and will provide regular system maintenance and monitoring of the project for the life of the loan.

004.06 Other conditions as determined by the Linked Deposit Lender Agreement.

005 Linked deposit funds will be deposited into a linked deposit account with an eligible financial institution only after the following requirements have been met:

005.01 The Department has approved the initial project eligibility.

005.02 The project is in compliance with all federal, state, and local requirements.

005.03 The eligible financial institution has submitted all required documentation in accordance with the Linked Deposit Lender Agreement to the Department.

006 The Department will withdraw funds from the linked deposit account in accordance with the terms set in the Linked Deposit Lender Agreement.

007 Full repayment of a loan by linked deposit borrower. If a linked deposit loan is fully repaid, the eligible financial institution will notify the Department within thirty days from when the loan was fully repaid. The Department may withdraw the remaining linked deposit balance, including any interest which is due and payable, within sixty days from when the linked deposit loan was fully repaid.

008 Loss of property control by borrower. In the event that the linked deposit borrower no longer has legal control over the land for the nonpoint source control system project or activity during the term period specified in the Linked Deposit Loan Contract, the eligible financial institution will notify the Department within thirty days from the eligible financial institution's discovery of the loss of property control. The Department may withdraw the remaining linked deposit balance, including any interest which is due and payable, within sixty days from the eligible financial institution's discovery of the loss of property control.

009 Noncompliance. For substantial non-compliance with terms and conditions of the Linked Deposit Lender Agreement, Linked Deposit Loan Contract, or the Linked Deposit Program by the eligible financial institution or linked deposit borrower, the Department may withdraw the remaining linked deposit balance, including any interest which is due and payable, within thirty days from the Department's notice of noncompliance.

009.01 Before any action is taken under 009 of this chapter, the Department may give thirty days written notice of the Department's intent to the eligible financial institution. The eligible financial institution shall have such time as indicated in the written notice to comply. If compliance is achieved, the eligible financial institution or the borrower shall revert to good standing.

010 Linked deposit borrower default. If a linked deposit borrower defaults on a linked deposit loan, the eligible financial institution will be responsible for the Linked Deposit Lender Agreement and all agreed upon scheduled withdrawals and interest as specified in the Linked Deposit Lender Agreement.

011 Selling of linked deposit loans. The eligible financial institution must not sell the linked deposit loan to another financial institution or entity without the approval of the Department.

APPENDIX I

SRF Cash Flow Model

* This occurs annually for both the Clean Water SRF (CWSRF) and for the Drinking Water SRF (DWSRF).

** In Nebraska, there are two SRF programs (CWSRF and DWSRF). The CWSRF and DWSRF are both managed by the NDEE, both share the same process for loans & repayments.
